Shin-Etsu Silicone Products Guide

Silicones Making Resins Highly Functional

4 Usage

Usage ① **Silicone Based Resins**

Usage ② **Resin Hybridization Agents**

Usage ③ **Surface Modifiers for Coating**

Usage ④ **Surface Modifiers for Pigments & Fillers**

Components of Resins and Coatings

Base Resins

Apply on the substrate as resin itself.

Improve other resins and impart them with the properties of silicones.

Additives

Modify the surface conditions of coatings.

Pigments & Fillers

Modify the surface of fillers to improve coating performance.

Shin-Etsu

Shin-Etsu Silicone

Silicones Making Resins Highly Functional

Resin compositions are mainly composed of "Base Resins," "Additives," and "Pigments & Fillers." Shin-Etsu Silicone has the following four uses and products for these three components to enhance the functionality of various resins.

INDEX

Product Name	Excellent Properties
Usage ① Silicone Based Resins Apply on the substrate as resin itself.	
P3 Emulsifier-free Water-based Rapid Curing Silicone Resin (Phenyl Type) KRW-6002	
P4 Emulsifier-free Water-based Rapid Curing Silicone Resin KRW-6000 Series	
P5 Water-based Water-repellent Coating Agent (Fluorine-free) KR-4000GE	
P6-7 High Hardness, Scratch Resistant Coating Agents	
P8 High Hardness, Water Repellency, Anti-fouling Coating Agents X-88-2003A	
P9 Anti-rust Coating Agents X-12-1442B	
P10 Solvent-based Water Repellent Agent for Textiles X-62-4595	
P11 High Adhesion and High Modulus in High Temperatures Silicone Pressure Sensitive Adhesive X-40-3449 / X-40-3454-2	
P12 Solventless Low Viscosity Silicone Release Coatings for Plastic Films X-62-1929 / X-62-1931-1	

Product Name	Excellent / Imparting Properties
P13 Ultra-Easy Release Silicone Release Coatings for Plastic Films (Solvent type)	
Usage ② Resin Hybridization Agents Improve other resins and impart them with the properties of silicones.	
P14 Silicone-based Flame Retardants for Polycarbonate KR-2710 / KR-481 / KR-480	
P15 Water Repellent, Stain Resistant High Weather Resistant Hydroxyl Group-Containing Silicone Modifier X-48-1900 Series	
P16 Organofunctional Cyclic Siloxane Materials	
P17 Single-end Methacrylic Modified Silicone Fluid X-26-5084	
P18 Dual-end Acrylic Modified Silicone Fluid X-22-1602 / X-26-5075	
Usage ③ Surface Modifiers for Coating Modify the surface conditions of coatings.	
※ This brochure does not list surface modifiers for coatings.	
Usage ④ Surface Modifiers for Pigments & Fillers Modify the surface of fillers to improve coating performance.	
P19 Cyclic Carbonate Type Silane Coupling Agent X-88-476	

Emulsifier-free Water-based Rapid Curing Silicone Resin (Phenyl Type)

Product Usage

Silicone Based Resins

Resin Hybridization Agents

KRW-6002

Contact → Sales and Marketing Department II
Phone : +81-3-6812-2407

Features and Benefits

- It is a water-dispersed type of silicone resin.
- It has excellent resin compatibility and **can be used in combination with organic resins.**
- It has excellent heat resistance and can be used at high temperatures of **around 250°C.**
- A film is formed as the water evaporates at room temperature.
- It does not contain organic solvents, and the only component generated during the curing reaction is **WATER.**
- **No emulsifiers are used,** and a 100% silicone film can be formed.
- It cures at room temperature, but **the curing time can be shortened by heating.**

Applications

- Resin binder
- Resin modifier
- Heat resistant paint

General Properties

Item	Product name	KRW-6002	KRW-6001	KRW-6000
Type		Methyl/Phenyl Type	Methyl Type	Methyl Type
Film hardness		Soft	Soft	Hard
Viscosity at 25°C	mm ² /s	2 - 2,000		
pH		7 - 9		
Active ingredient	%	30 (Water solution)		
Recommended film thickness	μm	<100	<50	<10

(Not specified values)

Curability of the Product Alone

Conditions & Item	Product Name	KRW-6002	KRW-6000	KR-242A ^{※1}
Room temperature	Tack-free	< 5 min	< 5 min	< 5 min
	Pot life	> 3 months	> 3 months	> 3 months
Room temperature ×1 week	Solvent resistance	±	±	-
	Pencil hardness	6B	3B	6B
80°C×10 min	Solvent resistance	±	+	-
	Pencil hardness	3B	F	4B
120°C×3 min	Solvent resistance	+	+	-
	Pencil hardness	4B	F	4B
150°C×1 min	Solvent resistance	+	+	-
	Pencil hardness	2B	F	2B
100°C×10 min → Room temperature × 1 week	Solvent resistance	+	+	-
	Pencil hardness	2B	2H	B

Substrate : Polished steel sheet , Bar coater #14,

Solvent resistance evaluation criteria : Acetone & toluene rubbing 50 times : Pass = + ,

Only toluene pass = ± , Acetone & toluene both failed = -

* 1 Shin-Etsu product solvent based resin

(Not specified values)

Advantages Over Other Resins

Item	Product name	KRW-6002				KRW-6000	
Organic resins		Acrylic ^{※1}		Acrylic urethane ^{※2}		Acrylic ^{※1}	
Resin blend ratio		80 / 20	20 / 80	80 / 20	20 / 80	80 / 20	20 / 80
Solid content (Organic resins / Si)							
HAZE of film		<1	<1	<1	<1	1.5	2.5

Substrate: Glass plate, bar coater #14 Coating haze: Coating after 1 week at room temperature measured with a haze meter (Not specified values)

*1 Water based acrylic emulsion made by SAIDEN CHEMICAL INDUSTRY CO.,LTD.

*2 Water-based acrylic polyol Em + water-based isocyanate curing agent made by DIC corporation

PR POINT

KRW-6002 has excellent compatibility with organic resins, so it can be used in combination with organic resins.

Emulsifier-free Water-based Rapid Curing Silicone Resin

Product Usage

Silicone Based Resins

Resin Hybridization Agents

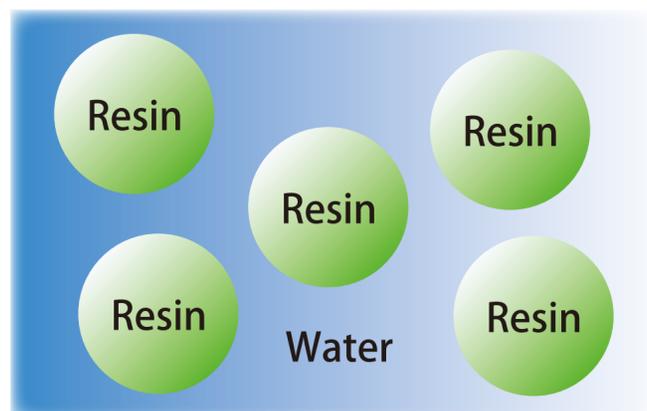

KRW-6000 Series

Contact → Sales and Marketing Department II
Phone : +81-3-6812-2407

■ Structure Model

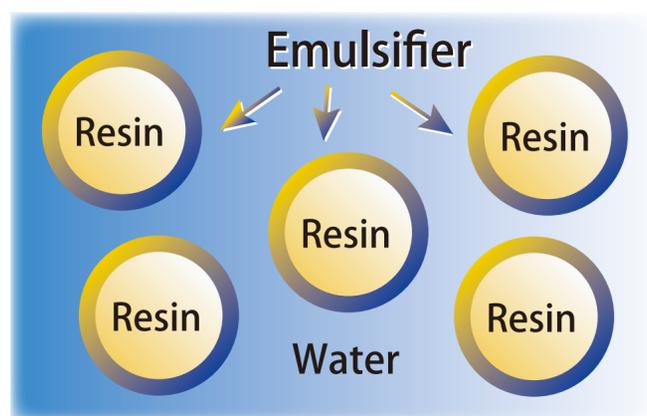

By introducing a special structure, **Emulsifier-free** has been achieved.

Expected properties = Improved weather resistance, heat resistance, water resistance, and moisture resistance

KRW-6000 Series

VS

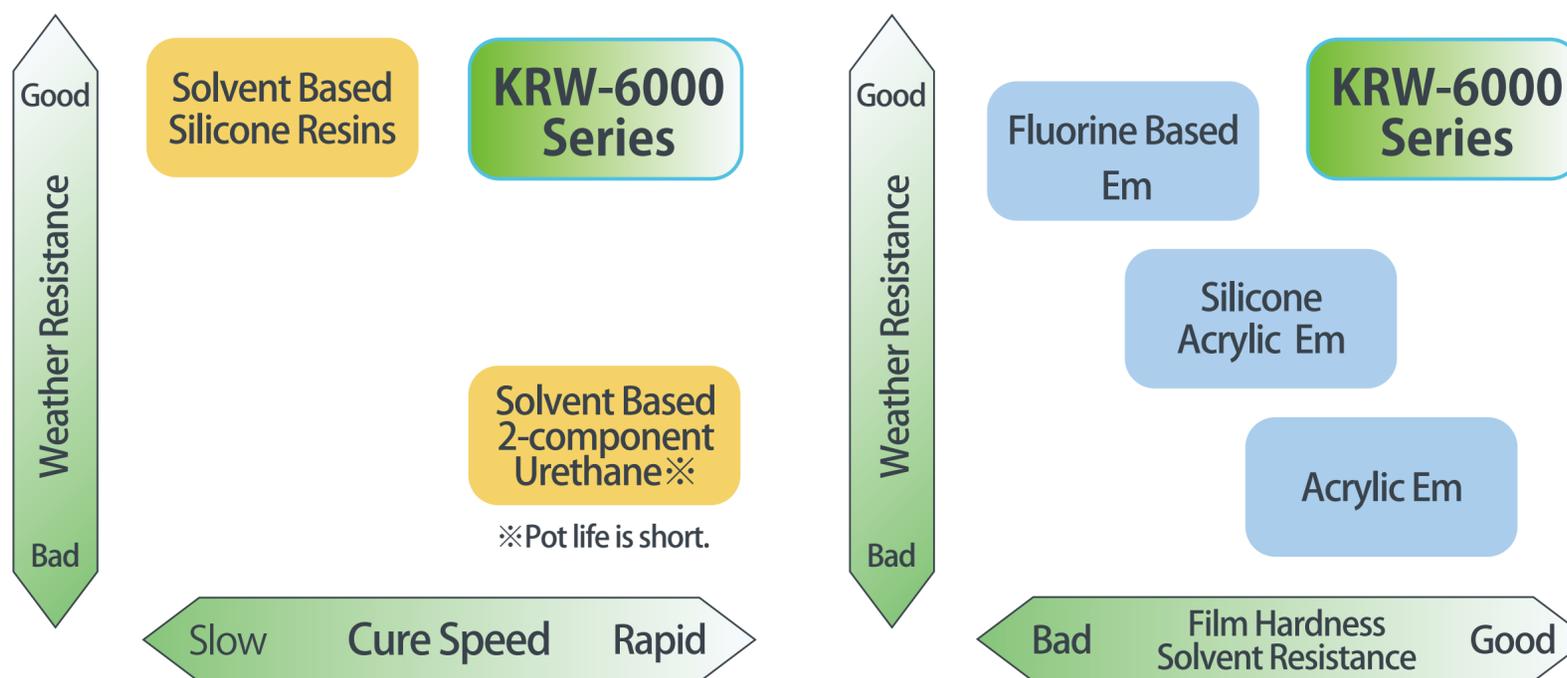

Conventional Silicone Resin Emulsion
Strongly hydrophobic, emulsifier is essential.

■ Advantages Over Other Resins

The KRW-6000 series forms a coating that cures quickly and has excellent weather resistance.

It is a water-based, one-component type, so it has a long pot life.

* For combined use with other resins, KRW-6002 is recommended.

Water-based Water-repellent Coating Agent (Fluorine-free)

Product Usage

Silicone Based Resins

KR-4000GE

Contact → Sales and Marketing Department II
Phone : +81-3-6812-2407

■ Features and Benefits

- It is an emulsion type of silicone resin (KR-4000G).
- Curing proceeds at room temperature without the need for a catalyst.
- Compared to conventional silicone RESIN emulsions, it has high water repellency.
- Compared to conventional silicone OIL emulsions, it has high durability.

■ Application Examples

- Antifouling coating agent

■ General Properties

Product name	KR-4000GE
Type	Methyl type resin emulsion
Viscosity at 25°C mPa · s	300 - 2,000
pH	6 - 8
Active ingredient %	55 (Water solution)
Recommended usage	Wipe application (thin film application)

(Not specified values)

■ Coating Properties

Product name	KR-4000GE	KR-4000GE +D-29 2% ^{*1}	Silicone Oil Emulsion ^{*2}	KR-4000G ^{*3}
1 day after application	Water contact angle(2μL)	95	101	101
	Water fall angle(20μL)	44	39	37
	Magic marker cissing	+	-	+
Rinse under running water ^{*4}	Water contact angle(2μL)	100	63	100
	Water fall angle(20μL)	45	54	39
	Magic marker cissing	+	-	+

*1 Ti catalyst made by Shin-Etsu Chemical Co., Ltd.

Water repellency is observed even in aqueous solution after 3 months of mixing

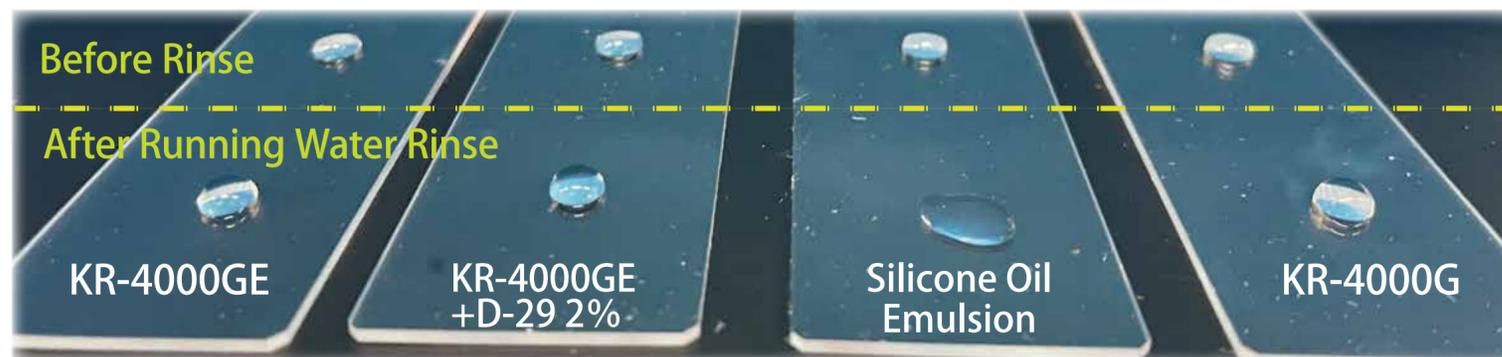

*2 Water-based water-repellent coating made by Shin-Etsu Chemical Co., Ltd.

*3 Solvent-based water-repellent coating made by Shin-Etsu Chemical Co., Ltd.

*4 Rinse under running water for 10 minutes, then wipe off with tissue.

(Not specified values)

■ Water Repellency after Running Water Rinse

* The upper side is unwashed, and the bottom side is after 10 minutes of running water rinse, wiping with tissue, and then dripping 0.02 mL of water onto it.

PR POINT

Although it is **water-based**, it has **high water-repellent durability**.

Decarbonization High Hardness Weather
Scratch Resistance Resistance Water
Repellency

High Hardness, Scratch Resistant Coating Agents

Silicone Based Resins

Contact → Sales and Marketing Department II
Phone : +81-3-6812-2407

Features and Benefits

- Adhere to plastic substrates without primer.
- Available in room temperature and UV curing types.
- It forms a coating that has excellent hardness and weather resistance.

Product Lineup (Solvent-free Low Viscosity Products)

Product name	Applicable resin substrate	Cure type	Viscosity at 25°C mm ² /s
X-88-1004	Acrylic	Room temperature	3.5
X-88-2019A	Urethane	Room temperature	8
X-48-1407	PC, Epoxy, PVC, ABS	Room temperature	1.3
X-48-5031*	PC, Acrylic	UV	50

* The main component is acrylic resin.

(Not specified values)

Application Example of X-48-1407 (PC) Substrate

Item	Product name X-48-1407	KR-400 (General grade)	Not applied
Adhesion (Initial)	+	-	N/A
Transparency (Initial, Hz)	0.4	0.4	< 0.1
Scratch resistance (SW200g* 11 reciprocation, Hz)	1.7	1.0	18 <
Pencil hardness (750g)	HB	HB	2B

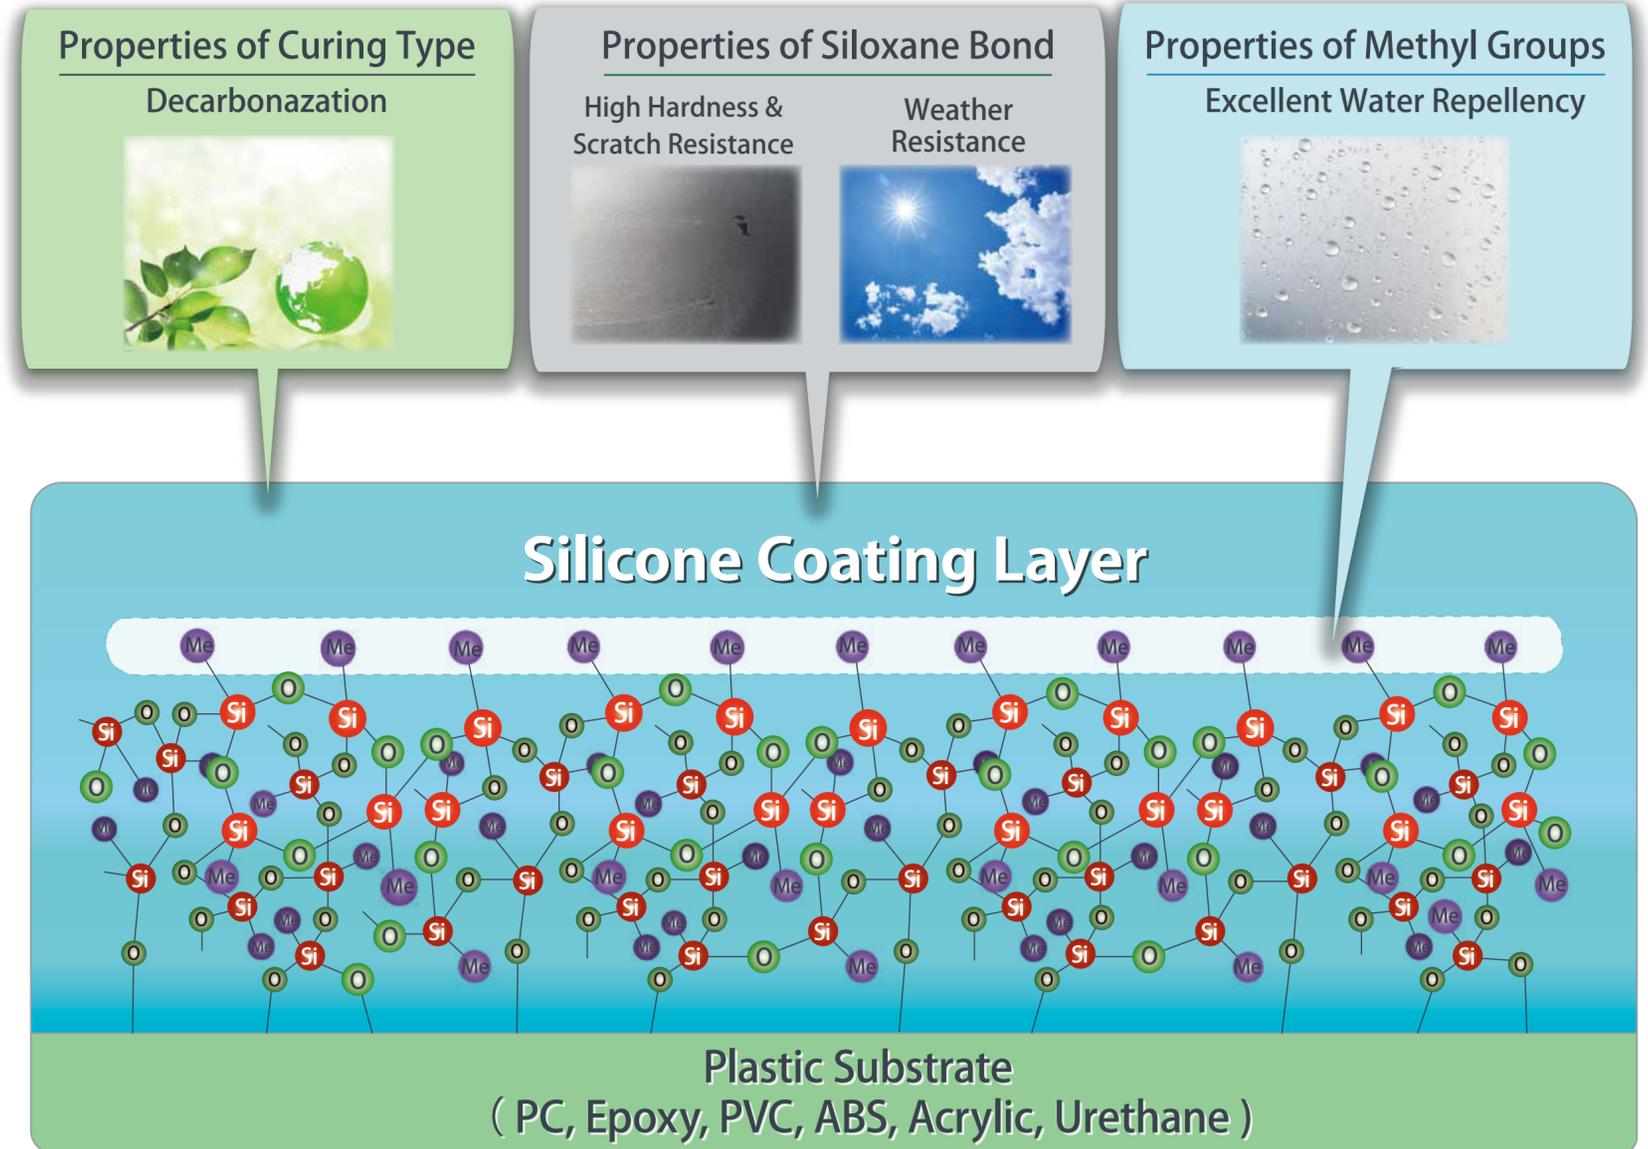

Substrate: Takiron transparent polycarbonate (PC1600)

(Not specified values)

Coating: Bar coater No. 14, measured after drying at room temperature for 4 days

Adhesion: Cross cut adhesion test, Scratch resistance: Steel wool abrasion, permeability measurement

Product Lineup (Solvent-free Low Viscosity Products)

Product name	Applicable resin substrate	Cure Type	Active ingredient %	Solvent	Viscosity at 25°C mm ² /s	Recommended curing conditions	Features	Curing catalyst blend
X-88-1004	Acrylic	Room temperature	100	-	3.5	25°C/50%RH × 1 day (Tack-free 60 min)	High hardness	Necessary ^{※2}
X-88-2019A	Urethane	Room temperature	100	-	8	25°C/50%RH × 1 day (Tack-free 30 min)	Water repellency	Unnecessary
X-48-1407	PC, Epoxy, PVC, ABS	Room temperature	100	-	1.3	25°C/75%RH × 1 day (Tack-free 30 min)	High hardness	Unnecessary
X-48-5031 ^{※1}	PC, Acrylic	UV	100	-	50	In air, high pressure mercury lamp 1,800mJ/m ²	High hardness, weather resistance	Unnecessary

※1 The main component is acrylic resin.

※2 When creating thick films, it is necessary to use silicone solvent in combination.

(Not specified values)

High Hardness, Water Repellency, Anti-fouling Coating Agent

X-88-2003A

Contact → Sales and Marketing Department II
Phone : +81-3-6812-2407

■ Features and Benefits

- Excellent water repellency, water sliding property, and resistance to permanent marker stains.
- Rapid cure, one-component condensation reaction type (demethanolization type).
- X-88-2003A has both high hardness and crack resistance.
- When used in combination with PRIMER-MP, it adheres well to polypropylene (PP).

■ General Properties

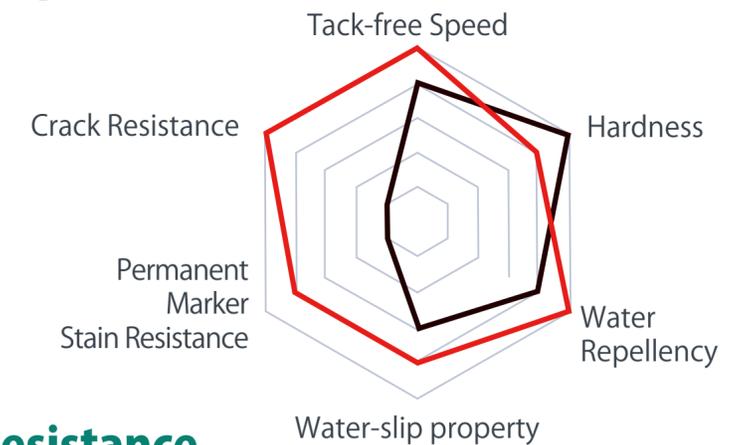

Product Name		X-88-2003A	KR-400 (Conventional product)
Tack-free	min	<30	30-60
Pencil hardness after 7 days		4H	8H
Water contact angle ^{※1} (2μL)	°	107	92
Water fall angle ^{※2} (20μL)	°	27	32
Crack resistance	Room temperature	+	+
	150°C×2h After heat resistance test	+	-
	SUV Test after 1 year equivalent	+	-
Permanent marker stain resistance		+	-
Adhesion to PP (by using PRIMER-MP)		+	-

(Not specified values)

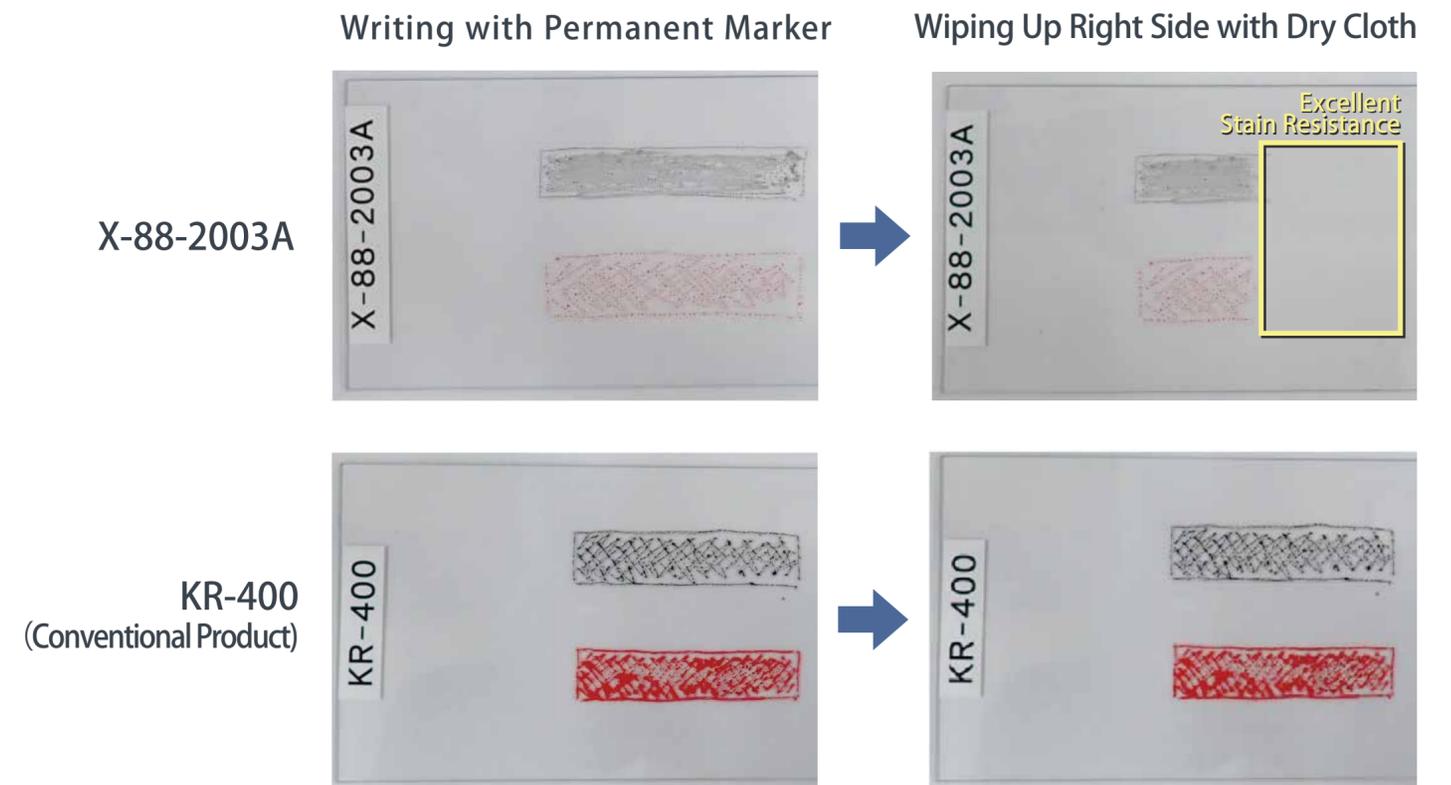

※1 The higher the value, the better the performance.
※2 The smaller the value, the better the performance.

■ Comparison with General-purpose Silicone Oligomers

- X-88-2003A
- KR-400
(Conventional product)

■ Permanent Marker Stain Resistance

Substrate: Soda Glass

Anti-rust

Anti-rust Coating Agents

Product Usage

Silicone Based Resins

X-12-1442B

Contact → Sales and Marketing Department II
Phone : +81-3-6812-2407

■ Features and Benefits

- This is a **moisture-curing** coating agent that contains a special structure.
- It is a **solvent-free**, low viscosity coating agent.
- It has excellent adhesion to metal and **durable anti-rust properties**.

■ Applications

Anti-rust treatment for aluminum and galvanized steel sheets

■ Salt Spray Test Results

Substrate pretreatment: Wipe the aluminum plate with toluene

Top coating: After adding a curing catalyst, apply with a bar coater → Dry at room temperature for 1 day

Salt spray tester was used (Suga Test Instruments Co., Ltd.)

■ General Properties

Item	Product name	X-12-1442B
Active ingredient wt%		100
Appearance at 25°C		Yellow liquid
Viscosity at 25°C mm ² /s		30 to 50
Standard curing conditions		Room temperature × 1 day Target film thickness 20μm

(Not specified values)

*We are also developing anti-rust coating agents for iron and copper.

Water
Repellency

Solvent-based Water Repellent Agent for Textiles

Product Usage

Silicone Based Resins

X-62-4595

Contact → Sales and Marketing Department II
Phone : +81-3-6812-2407

■ Features and Benefits

- The fabric becomes water-repellent by soaking it in the product and then drying it.
- It can be used on a variety of materials including cotton and polyester.

■ Applications

- Water-repellent treatment of fabric

■ How to use

1. Use IPA or a hydrocarbon solvent to dilute the active ingredient to about 0.5-5%.
2. Immerse the fabric in the adjusted solution and dry it at room temperature to 150°C for a few minutes to several tens of minutes.

■ General Properties

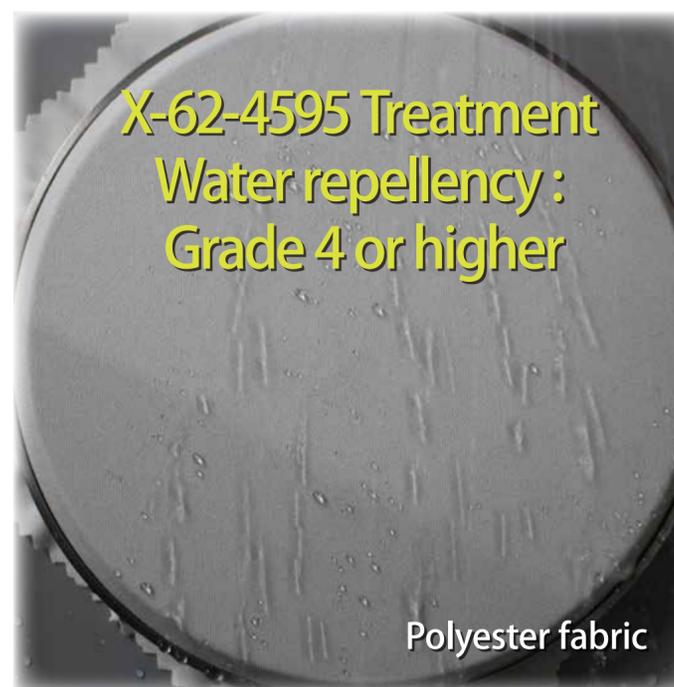

Product Name	X-62-4595
Parameter	
Active ingredient wt%	50
Solvent	IPA
Appearance	Yellow Liquid
Viscosity at 25°C mPa · s	20

(Not specified values)

■ Water Repellency Evaluation

JIS L 1092 (Spray Test)

It exhibits water repellency of Grade 4 or higher.

Test conditions :

1. Polyester fabric is immersed in a treatment bath containing 1% diluted active ingredient and then squeezed out.
2. Leave for 30 minutes, then heat treatment at 105°C for 2 minutes.
3. Water repellency evaluation: JIS L 1092 (spray test) was conducted.

High Adhesion in
High Temperatures

High Modulus

High Adhesion and High Modulus in High Temperatures Silicone Pressure Sensitive Adhesive

Silicone Based Resins

X-40-3449 / X-40-3454-2

Contact → Sales and Marketing Department II
Phone : +81-3-6812-2407

■ Features and Benefits

- Addition cure type silicone PSA with excellent adhesion and holding power.
- Excellent adhesive force under high temperature.
- The cured adhesive layer has a high storage modulus.
- Strongly adheres to silicone rubber-based materials.
- X-40-3454-2 has no tack and its adhesion increases after it is bonded to the adherend.

■ Adhesive Properties

Parameter		Product Name			
		KR-3700 Conventional product	X-40-3449	X-40-3454-2	
Adhesion N/25mm	SUS	RT	10.6	6.6	7.4
		in 180°C	1.4	4.7	3.5
	Silicone rubber	0.5	4.2	3.7	
Holding power in 230°C×1h	mm	0.01	0.00	0.00	
Ball tack (No.)		42	38	0	
Storage modulus G' MPa	25°C	0.49	3.20	4.49	
	80°C	0.04	0.71	0.80	

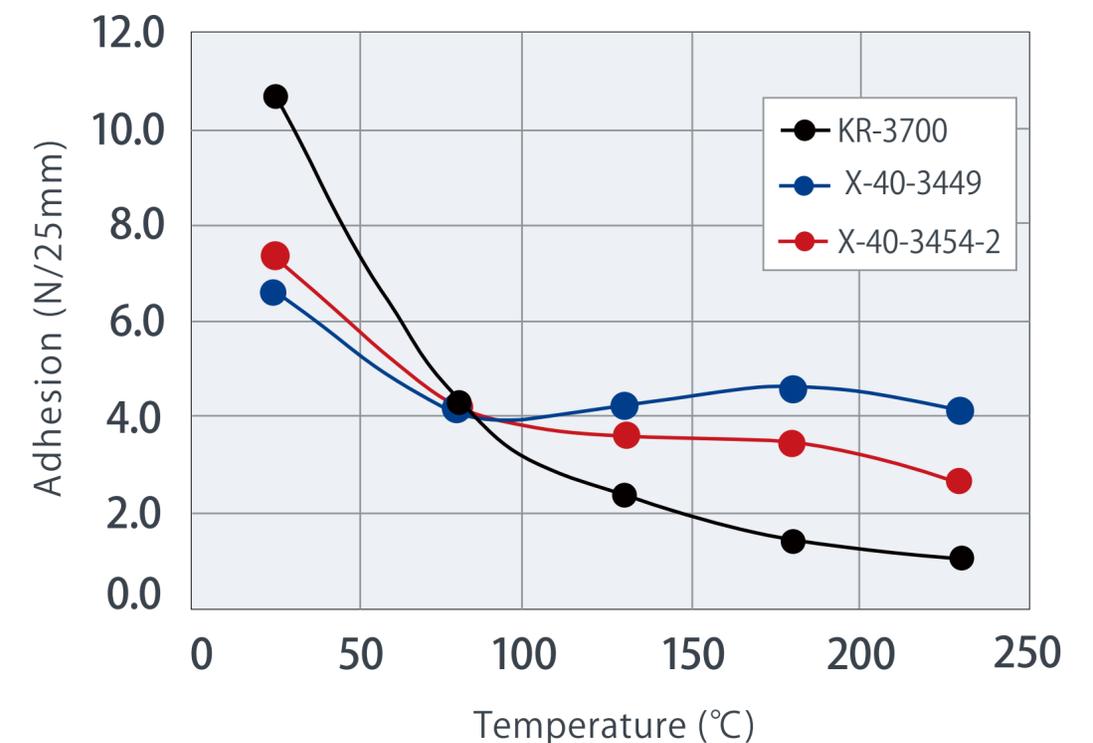

Substrate: Polyimide film 25 μm
PSA thickness: 40 μm
Storage modulus G' : Measurement frequency 1Hz, strain 0.1%

(Not specified values)

■ Applications

- Heat-resistant adhesive tape
- Masking tape
- Carrier tape
- Temporary fastening and fixing tape
- Electrical insulation tape
- Heat seal tape
- OCA seat
- Silicone rubber fixing adhesive tape

■ Adhesion in High Temperature

Release Property

Solventless Low Viscosity Silicone Release Coatings for Plastic Films

Product Usage

Silicone Based Resins

X-62-1929 / X-62-1931-1

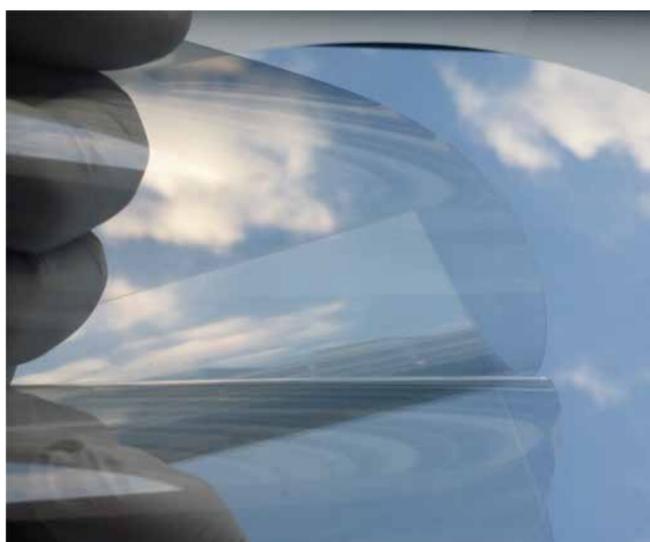

Contact → Sales and Marketing Department II
Phone : +81-3-6812-2407

■ Features and Benefits

- It is solventless and has extremely low viscosity.
- Thin coating with a coating weight of up to 0.1g/m² is possible.
- It can be applied more smoothly than conventional products.
- No blocking occurs.
- It is possible to reduce platinum content.
- It adheres to the film.

■ Applications

- Release agents for films

Release-coated film

■ Applications

- Release agents for films

Silicone-based Flame Retardants for Polycarbonate

Resin Hybridization Agents

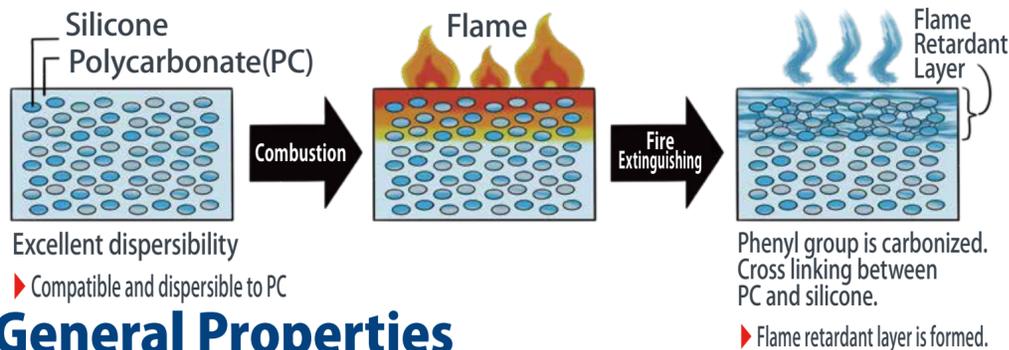

KR-2710 / KR-481 / KR-480

Contact → Sales and Marketing Department II
Phone : +81-3-6812-2407

Features and Benefits

- These silicones exhibit flame retardancy when used **in combination with a sulfonate**.
- **Formulated without fluorine additives**, it achieves **UL94 V-0 flame retardancy** while maintaining transparency.
- Compared to other flame retardants, the addition amount is small and it is less likely to decompose due to heat, making it possible to **design recyclable resins**.

Estimated Flame Retardant Mechanism

General Properties

Item	Product name	KR-2710	KR-481	KR-480
Functional groups		-Me/Ph/H	-Me/Ph	-Me/Ph
Structure		Straight chain	Branch	Branch
Appearance		Colorless transparent liquid	White flake	White flake
Active ingredient %		100	100	100
Softening point °C		-	130	90
Refractive index		1.52	1.56*	1.54*
Viscosity mm ² /s		50	-	-
Transparency when adding to PC		+(Transparent)	±(Relatively transparent)	-(Not transparent)

*Estimated value

(Not specified values)

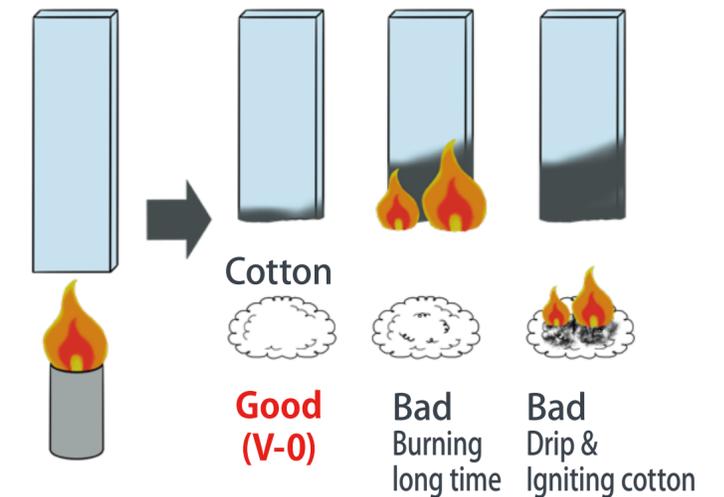

Transparency when Adding Polycarbonate

Compared to KR-481 (conventional product), **KR-2710 does not impair transparency** even when added to PC.

Test piece thickness : 2mm

Water Repellent, Stain Resistant, High Weather Resistant Hydroxyl Group-Containing Silicone Modifier

Product Usage

Resin Hybridization Agents

X-48-1900 Series

Contact → Sales and Marketing Department II
Phone : +81-3-6812-2407

■ Features and Benefits

- These are silicone oligomers containing alcoholic hydroxyl groups.
- Resin modification is possible by simply mixing at room temperature (cold blending), eliminating the need for large synthesis equipment.
- It has excellent resin compatibility and is unlikely to bleed out or separate during curing.

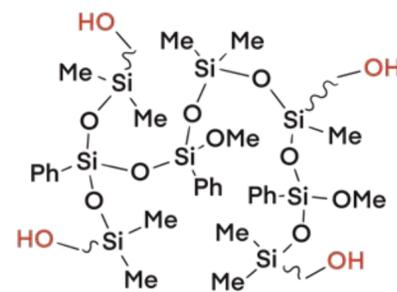

■ Applications

- Resin modifier

■ Applicable Resins

- Polyurethane
- Polyester
- Melamine resin, etc.

■ Structure Model

■ General Properties

Product name	X-48-1901	X-48-1903L	X-48-1904S
Imparting properties	Flexibility Adhesion	Water repellency Stain resistance	Weather resistance
Additional properties	Excellent compatibility	Reduced addition amount	Excellent compatibility
Appearance	Colorless transparent liquid	Slightly white cloudy liquid	Colorless transparent liquid
Active ingredient %	100	100	50
Viscosity at 25°C mm ² /s	1,000	4,000	20
Solvent	Not contained	Not contained	Toluene
Recommended addition amount wt%	1~10	0.5~5	5~50
Water solubility (Appearance of 50% water solution)	Good (Dispersion)	Bad (Precipitation)	Bad (Separation)

(Not specified values)

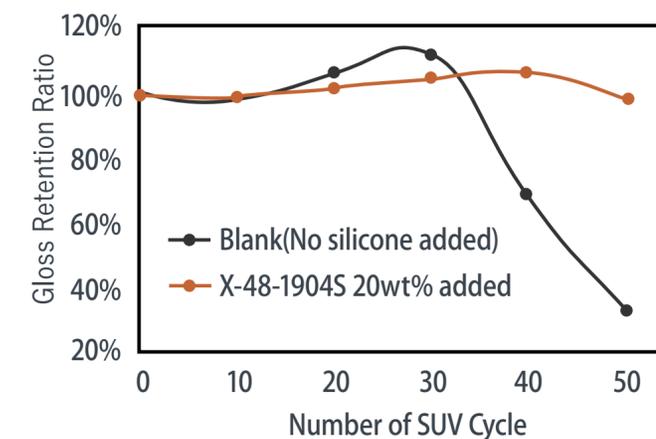

■ Antifouling / Water Repellency Test

Conditions	Non additive	X-48-1903L 1wt % added
Item		
Appearance		
Water contact angle 2μL	90	101

【Test conditions】 Paint: 2-component polyurethane paint
Film thickness: 14 μm, Substrate: glass plate
Write with permanent marker Mackey (manufactured by Zebra Co., Ltd.)

(Not specified values)

■ Weather Resistant Test (Gloss Retention Ratio)

【Test conditions】
Paint: 2-component polyurethane paint
Film thickness: 30 μm
Substrate: Polyester coated steel plate
Gloss retention ratio:
Calculated from 60 degree specular gloss measurement
SUV test:
1 cycle=UV (90mW) irradiate for 4h
→Darkness 4h→Condensation 4h
※10 cycles equals one year's worth of UV irradiation

UV Cure Film Cure Shrinkage Relaxation Evaluation

X-48-5140B

A composition containing 2 wt% of a photoinitiator is applied to a PET film and cured at 600 mJ/cm² under N₂ atmosphere.

Comparison: DPHA (Hexafunctional acrylic)

【Dual Functional Type】

Product name	Active ingredient %	Organic functional groups X	Functional group structure	Consistency at room temperature	Viscosity 25°C, mPa·s	Functional group equivalent g/mol
X-40-2678	100	Alicyclic epoxy		Transparent liquid	120	290
X-40-2728	100	Glycidyl		Transparent liquid	30	270
X-48-6942	100	Primary amine	-CH ₂ -NH ₂	Transparent liquid	30	250
X-48-9672	100	Succinic anhydride		Transparent liquid	2,400	300
X-48-1142	100	Primary alcohol	-CH ₂ -OH	Transparent liquid	100	260
X-48-5042P	100	Methacrylic		Transparent liquid	16	310
X-48-5142B	100	Acrylic		Transparent liquid	20	310
X-48-9502	100	Phenol		Transparent liquid	1,000	250

(Not specified values)

Water and Oil
Repellency

Single-end Methacrylic Modified Silicone Fluid

Product Usage

Resin Hybridization Agents

X-26-5084

Contact → Sales and Marketing Department I
Phone : +81-3-6812-2406

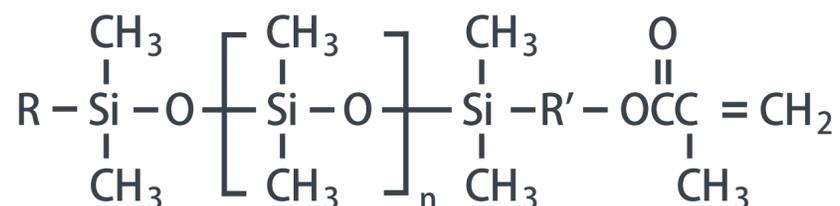

■ Features and Benefits

- X-26-5084 enables acrylic resins to improve their water and oil repellency, copolymerizing with conventional organic acrylates.

■ Applications

- For resin modification
- For paint additives

■ Chemical Structure

■ General Properties

Parameter	Product name	X-26-5084
Appearance		Colorless transparent liquid
Viscosity at 25°C	mm ² /s	60
Specific gravity at 25°C		0.97
Refractive index at 25°C		1.405
Functional Group Equivalent	g/mol	4,500

(Not specified values)

■ Test Data

Making copolymerization film of methacrylic monomers

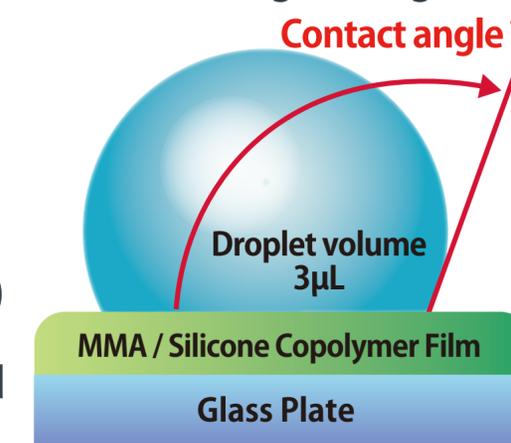

【 Formulation 】

Composition	Parts by weight
MMA	70
X-26-5084	30
Solvent	100
Polymerization initiator	1

【 Test Method 】

1. The acrylic composition is solution polymerized.
2. Polymerization liquid is applied to a glass plate (film thickness after drying : 3 μm)
3. Add 3 μL of water and oleic acid and measure the contact angle

【 Contact Angle Image 】

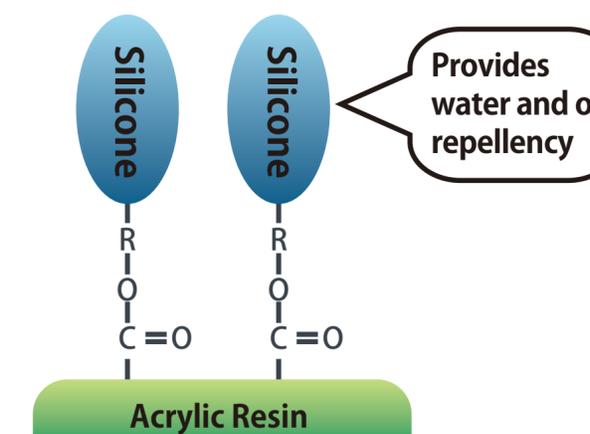

【 Test Results 】

Parameter	Silicone content	Silicone content	
		Contained	Not Contained
Appearance		Colorless transparent	Colorless transparent
Water Contact Angle* °		101	69
Oleic Acid Contact Angle* °		32	7

* The higher the value, the better the performance.

Dual-end Acrylic Modified Silicone Fluid

Product Usage

Resin Hybridization Agents

X-22-1602 / X-26-5075

Contact → Sales and Marketing Department I
Phone : +81-3-6812-2406

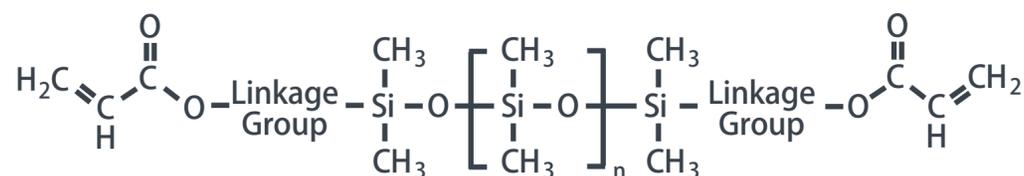

Features and Benefits

- Applicable to UV-radical curing coatings.
- More compatible with acrylic monomers and resins than conventional acrylic-modified silicone fluids, enabled by the high polarity of the linkage groups.
- Excellent UV-curing properties, requiring only a small amount of irradiation to cure.
- Enhancing lasting water and oil repellency

Applications

- For resin modification
- For paint additives

Chemical Structure

Properties and Product Position

Item	Reference	X-22-1602	X-26-5075
Solubility	±	+	+
UV curability	±	+	++

※ ++ : Excellent + : Good ± : Relatively poor

Test Data

Addition to acrylic monomer-based UV coating agents.

【Formulation】

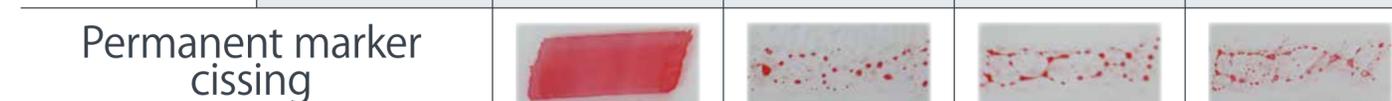

Composition	Parts by weight
Multi functional acrylic monomer	100
Silicone	2
Photoinitiator	2

【Test Method】

1. The composition liquid is applied to PMMA substrates (film thickness 8μm).
2. UV irradiation under nitrogen atmosphere (UV-LED(365 nm); 1400 mJ/cm²)
3. Various tests are conducted

【Test Results】

Item	Blank	After silicone addition		
		Reference	X-22-1602	X-26-5075
Appearance	Transparency	+	±	+
	Smoothness	+	-	+
Contact angle ^o	Water	40	97	96
	Oleic Acid	15	49	51

※ The higher the value, the better the performance.
+ : Good ± : Relatively poor - : Poor

Adhesion

Cyclic Carbonate Type Silane Coupling Agent

Product Usage

Surface Modifiers for Pigments & Fillers

X-88-476

Contact → Sales and Marketing Department II
Phone : +81-3-6812-2407

■ Features and Benefits

- A silane coupling agent with a cyclic carbonate structure.
- CO₂ is effectively utilized as a raw material.
- It improves adhesion between fillers such as glass fiber and resin.
- By retaining cyclic carbonate, it is possible to create a stable aqueous solution.
- It reacts with amines to form urethane structures with OH groups.

■ Applications

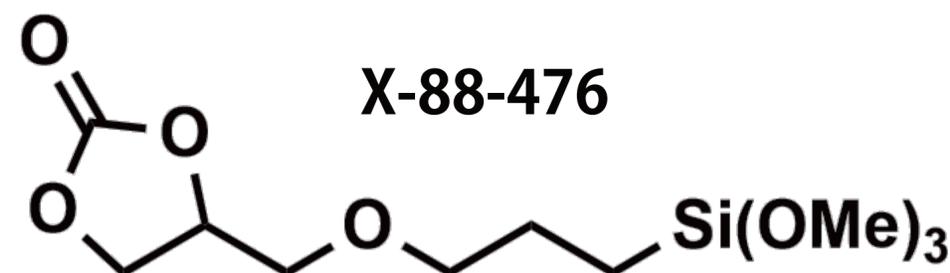

- Resin additives (improving adhesion)
Applicable resin:
Epoxy, polycarbonate, urethane, nylon, acrylic, phenol, melamine, polyester, polyimide, etc.

■ General Properties

Parameter	Product name X-88-476
Applicable solvent type	Organic solvent type, water type
Solvent type	Solvent free
Usage	Additives
Organic functional group	Cyclic carbonates

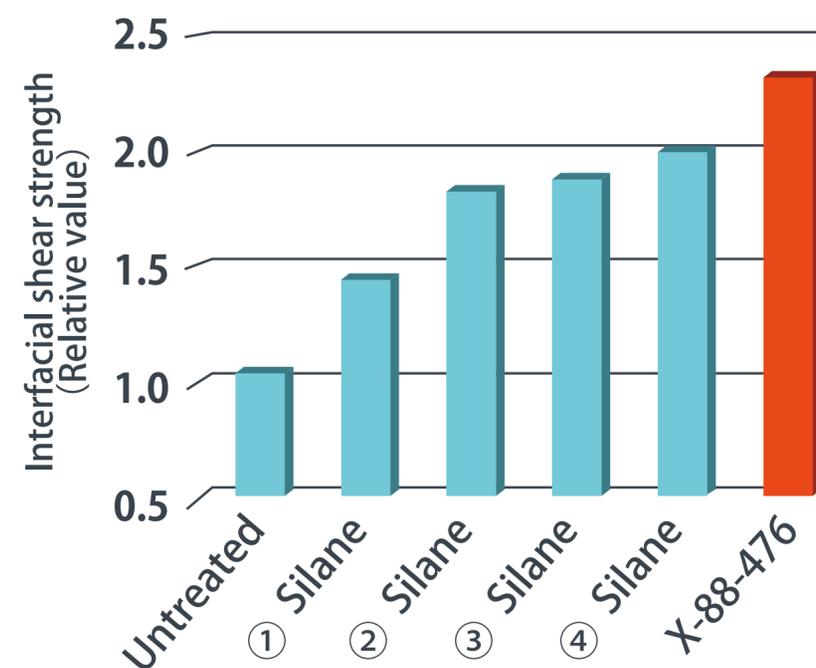

(Not specified values)

■ Chemical Structure

■ Improved Adhesion between Glass and Epoxy Resin

Glass fiber is treated with 1wt% silane solution.
Evaluation by microdroplet method.
