## Silicones Making Resins Highly Functional

Product Search Website  
Shin-Etsu Silicone Selection Guide

<https://www.shinetsusilicone-global.com/guide/>

\*This catalog includes products not listed in the selection guide.

### Components of Resins and Coatings

#### Base Resins

Apply on the substrate as resin itself.

Improve other resins and impart them with the properties of silicones.

#### Additives

Modify the surface conditions of coatings.

#### Pigments & Fillers

Modify the surface of fillers to improve coating performance.

### 4 Usage

Usage ① Silicone Based Resins

Usage ② Resin Hybridization Agents

Usage ③ Surface Modifiers for Coating

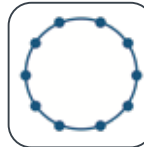

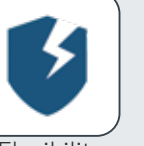

Usage ④ Surface Modifiers for Pigments & Fillers

# Silicones Making Resins Highly Functional

Resin compositions are mainly composed of "Base Resins," "Additives," and "Pigments & Fillers." Shin-Etsu Silicone has the following four uses and products for these three components to enhance the functionality of various resins.

## INDEX

Product Name	Excellent Properties
<b>Usage ① Silicone Based Resins</b> Apply on the substrate as resin itself.	
P3 Ultra High Heat Resistant Silicone Fluid X-25-3004	 Heat Resistance
P4 High Refractive Index Silicone Fluid X-25-3003B	 High Refractive Index  Heat Resistance
P5 Solventless Silicone Release Coatings for Plastic Films	 Release Property
P6 Emulsion-Type Silicone Release Coatings for Plastic Films	 Release Property
P7 Ultra-Easy Release Silicone Release Coatings for Plastic Films (Solvent Type)	 Release Property
P8 High Concentration, Solvent-Free Silicone Pressure Sensitive Adhesive	 Adhesiveness  High Transparency  Impact Absorption
P9 High Hardness, Water Repellency, Anti-fouling Coating Agents X-88-2003A / X-88-2005	 High Hardness  Flexibility Crack Resistance  Permanent Marker Stain Resistance  Water Repellency
P10 Photo-Curing Hard Coating Agent X-48-5030 / X-48-5031	 High Hardness  Low Warp
P11 Room Temperature Cure Water Repellent Silicone X-48-2316	 Solvent Resistance  Water Repellency  Release Property  Electrical Insulation  Heat Resistance  High Hardness High Strength

Product Name	Excellent / Imparting Properties
P12 Cationic Silicone Film-Forming Emulsion X-52-8500DA / X-52-8499D / KM-9804	 Reduced LMW Siloxane  Film Forming Property  Water Repellency  Weatherability
P13 Silicone Resin Emulsion X-52-8432	 Weatherability  Heat Resistance  Anti-fouling Property
<b>Usage ② Resin Hybridization Agents</b> Improve other resins and impart them with the properties of silicones.	
P14 Silicone-Based Flame Retardants for Polycarbonate KR-2710 / KR-481 / KR-480	 Flame Retardancy  High Transparency
P15 Organofunctional Cyclic Siloxane Materials	 Low Cure Shrinkage  Flexibility Crack Resistance
P16 Water Repellent, Stain Resistant, High Weather Resistant Hydroxyl Group-Containing Silicone Oligomer X-48-1903 / X-48-1904 Series	 Flexibility Crack Resistance  Water Repellency Stain Resistance  Weather Resistance
<b>Usage ③ Surface Modifiers for Coating</b> Modify the surface conditions of coatings.	
P17 Silicone Powder	 Stress Relief Impact Resistance  Surface Slipperiness Abrasion Resistance Flexibility (Feeling)  Light Diffusivity Mattiness
<b>Usage ④ Surface Modifiers for Pigments &amp; Fillers</b> Modify the surface of fillers to improve coating performance.	
P18 Highly Reactive Surface Modifier X-88-398	 Dispersibility  Water Repellency

Heat  
Resistance

# Ultra High Heat Resistant Silicone Fluid

Product Usage

Silicone Based Resins

## X-25-3004

Contact → Sales and Marketing Department I  
Phone : +81-3-6812-2406

### ■ Features and Benefits

- It can be used for long periods of time in high temperature environments of **300°C**.  
(Conventional product heat resistance temperature is **250°C**.)

### ■ Application Examples

- Heating medium oil for oil baths, circulating heating, etc.
- Lubricating oil for automotive components that require higher temperatures

### ■ General Properties

Product Name		X-25-3004
Item		
Appearance		Pale yellow transparent
Viscosity	mm <sup>2</sup> /s	400
Specific gravity		1.07
Refractive index		1.503
Volatile content 150°C×24h %		0.1

(Not specified values)

### ■ Appearance

X-25-3004

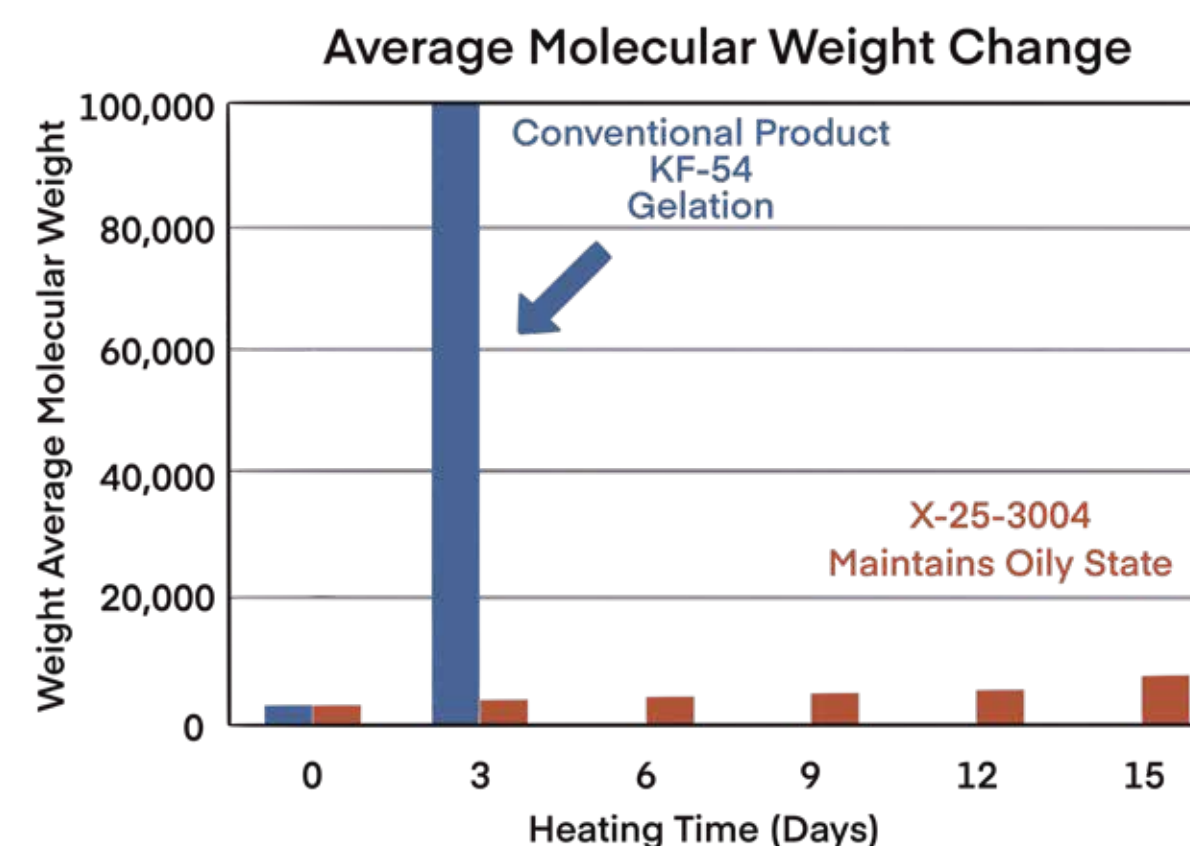

KF-54

(Conventional Product)

### ■ Heat Resistant Test Results at 300°C

Test method:  
1. Collect 25g of sample into a 100mL beaker  
2. Heated to 300°C in open air condition

# High Refractive Index Silicone Fluid

X-25-3003B

Contact → Sales and Marketing Department I  
Phone : +81-3-6812-2406

## ■ Features and Benefits

- **Higher refractive index** than conventional silicone fluids.  
**(1.50 → 1.54)**
- It can be used in environments with temperatures up to 250°C.
- Improving luster by light scattering effect with high refractive index.

## ■ General Properties

Product name		X-25-3003B
Item		
Appearance		Colorless to paleyellow transparent
Viscosity	mm <sup>2</sup> /s	1,410
Specific gravity		1.11
Refractive index		1.539
Volatile content 150°C×24h	%	0.1

(Not specified values)

## ■ Alcohol Resistance Test Results

Alcohol	MeOH	EtOH	IPA
Product name			
X-25-3003B	Insoluble	Insoluble	Insoluble
KF-54 (Conventional grade)	Insoluble	Partly soluble	Soluble

Test method: 1. Mix 1g of sample and 1g of alcohol 2. Shake and let stand (Not specified values)

## ■ Application Examples

- Immersion liquids and filling liquids that require a high refractive index
- Filling liquid for liquid optical waveguides, etc.

Image of optical waveguide

Image of clad filled with silicone fluid

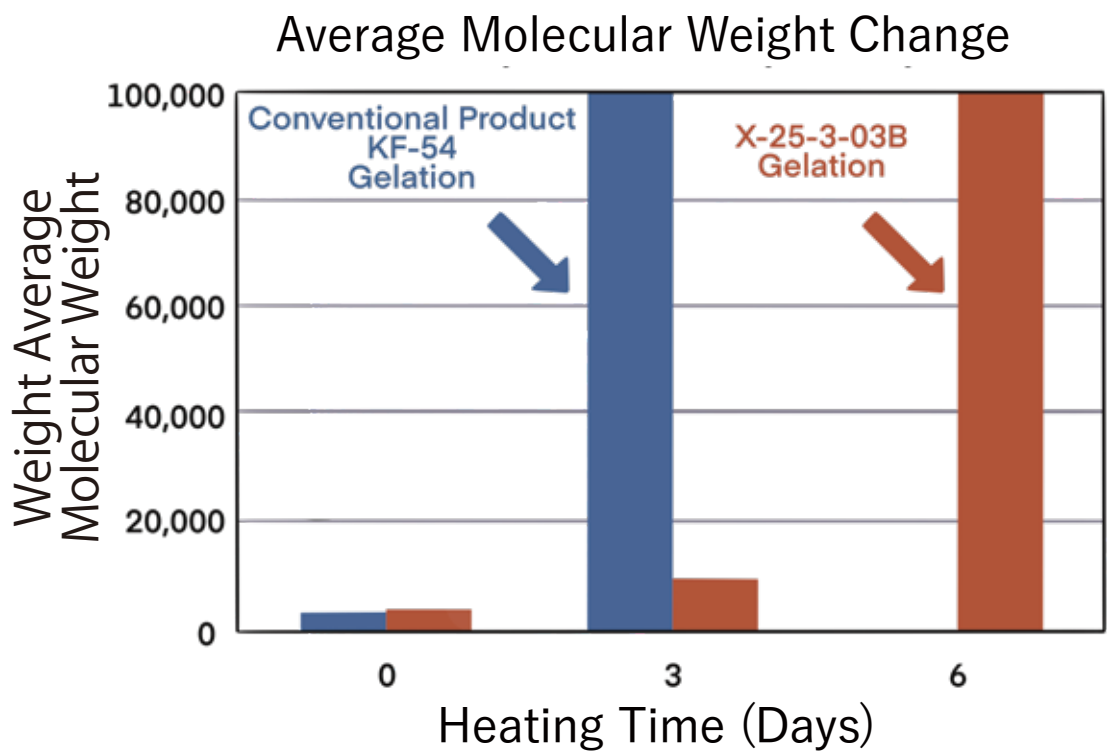

Image of total reflection of light

## ■ Heat Resistance Test Results at 300°C

Test method:  
1. Collect 25g of sample into a 100mL beaker  
2. Heated to 300°C in open air condition

Release  
Property

# Solventless Silicone Release Coatings for Plastic Films

Product Usage

Silicone Based Resins

Contact → Sales and Marketing Department II  
Phone : +81-3-6812-2407

## ■ Features and Benefits

- Solvent-free silicone release agents usually do not adhere to films, but by using adhesion improver X-92-263, it is possible to achieve adhesion while maintaining easy releasability.

## ■ General Properties

Formulation					Appearance of formulation bath	Haze <sup>※</sup> %
	KNS-320A	X-92-263	X-62-1387	CAT-PL-56		
1	100	—	—	2	Transparent	2.4
2	100	10	—	2	Cloudiness	2.4
3	—	—	100	2	Transparent	2.3

\* Haze: Measured on coated film (coating weight: 0.7 g/m<sup>2</sup>, PET) Addition of X-92-263 does not change the transparency of the film. (Not specified values)

Label aging 25° C, 70 g/cm <sup>2</sup> , 1 day		Label aging 70° C, 20 g/cm <sup>2</sup> , 1 day		Anchorage		
Release force N/25mm	Subsequent adhesion %	Release force N/25mm	Subsequent adhesion %	Initial	60° C, 90% RH	
					1 day	3 days
1	0.10	105	0.13	102	-	-
2	0.09	104	0.13	103	+	+
3	0.47	99	2.5	99	+	+

Substrate: 38 μm PET film Curing conditions: 120° C x 30 s Coating weight: 0.7 g/m<sup>2</sup> Liner aging: 25° C x 1 day Tape: TESA-7475 (Not specified values)

## ■ Applications

- Release agents for films

Film coated with release agent

Release  
Property

# Emulsion-Type Silicone Release Coatings for Plastic Films

Product Usage

Silicone Based Resins

Contact → Sales and Marketing Department II  
Phone : +81-3-6812-2407

## ■ Features and Benefits

- Solvent-free release film manufacturing process.
- Anchorage to film substrates is improved by an anchorage promoter.

## ■ General Properties

Main component	Features	Release force N/50mm	Silicone migration	Anchorage		
				PET film	PE laminate	Glassine
X-52-6015	Tight release	1.50	None	++	+	+
X-52-6068	Middle release	0.35	None	+	+	+
KM-3951 (Conventional product)	Easy release	0.15	None	-	+	+

(Not specified values)

Additive	Characteristic	Standard additive amount
CAT-PM-10A	Catalyst for addition curing emulsions	5%
X-92-236	Crosslinker emulsion, improved curability and subsequent adhesion	1 -2.5%

(Not specified values)

## ■ Anchorage Promoter

- Formulation : KM-3951 / Water / CAT-PM-10A / Anchorage promoter = 100 / 700 / 5 / x

Anchorage promoter mix ratio x	Anchorage (Initial)	Release force N/25mm	Subsequent adhesion %
0	-	0.21	89
2.0	+	0.15	90

PET film substrate, coating weight 0.10 g/m<sup>2</sup>, 150 °C x 30 s cure, tesa7475 tape release force 25°C, 70gf/cm<sup>2</sup>, 20h  
Initial anchorage can be improved by adding 0.5 parts of anchorage promoter.

(Not specified values)

## ■ Applications

- Release agents for papers or films

Appearance of emulsion products

Release agents for stickers

Release  
Property

# Ultra-Easy Release Silicone Release Coatings for Plastic Films (Solvent Type)

Product Usage

Silicone Based Resins

Contact → Sales and Marketing Department II  
Phone : +81-3-6812-2407

## ■ Features and Benefits

- Ultra-easy release is possible while maintaining a high subsequent adhesion.
- High anchorage to film substrates

## ■ General Properties

Item Product name	Appearance	Non-volatile content %	Viscosity mPa·s	Solvent
X-62-2888	Colorless transparent to paleyellow translucent	30	10,000	Toluene
X-62-2892	Colorless transparent to paleyellow translucent	30	7,000	Toluene

(Not specified values)

Item Product name	Label aging 25°C, 70g/cm <sup>2</sup> ,1 day		Label aging 70°C, 20g/cm <sup>2</sup> ,1 day		Anchorage
	Release force N/25mm	Subsequent adhesion %	Release force N/25mm	Subsequent adhesion %	
KS-847T	0.15	100	0.24	99	+
X-62-2888	0.09	94	0.15	95	+
X-62-2892	0.08	94	0.09	93	+

Substrate: 38 μm PET film   Curing conditions: 120°C x 30 s   Coating weight: 0.2 g/m<sup>2</sup>   Liner aging: 25°C x 1 day   Tape: TESA-7475   (Not specified values)

## ■ Applications

- Release agents for films

# High Concentration, Solvent-Free Silicone Pressure Sensitive Adhesive

Contact → Sales and Marketing Department II  
Phone : +81-3-6812-2407

## ■ Features and Benefits

- It can be diluted with any solvent. High concentration coating is possible, making it easy to create thick films.
- The silicone layer cushions the impact.
- Highly transparent and durable.

## ■ Applications

- Adhesive tape, adhesive sheet
- Shock absorbing film for displays
- Potting

## ■ General Properties

Item Product name	Type	Silicone content %	Viscosity 25°C Pa·s	Sticky force N/25mm		Holding power mm		Ball tack No.	Total light transmittance % (Blank:90.4)	HAZE (Blank:1.0)	Hardness Asker C
				Room temperature	100°C×1h	Room temperature	100°C×1h				
X-40-3326	Low adhesion	100	50	0.05	0.21	0.01	0.00	<3	91.7	0.8	30
X-40-3340	Medium adhesion	100	55	1.1	1.74	0.00	0.00	10	91.3	0.7	10
X-40-3331-2	High adhesion	75	35	9.6	12.3	0.17	0.02	44	90.5	0.7	5

\*PSA/CAT-PL-56=100/0.5, Substrate:PET25μm, Adhesion Thickness:100μm, Cure conditions: 130 °C×1 min (Not specified values)

## ■ Measure Method of Impact Force

## ■ Impact Absorption

Composition of protective film	Thickness of adhesive μm	Impact force <sup>*1</sup> kN	Impact force ratio <sup>*2</sup>
Film + X-40-3340 + Glass	500	13.8	0.40
Film + X-40-3326 + Glass	500	10.9	0.32
Film (PET 50μm) + Glass		34.2	1.00

(Not specified values)

- \*1 Impact force: The smaller the value, the better the impact absorption performance.  
\*2 Impact force ratio: Ratio of impact force when film (PET 50μm) + glass is set to 1.0.

# High Hardness, Water Repellency, Anti-fouling Coating Agents

Product Usage

Silicone Based Resins

## X-88-2003A / X-88-2005

Contact → Sales and Marketing Department II  
Phone : +81-3-6812-2407

### ■ Features and Benefits

- Excellent water repellency, water sliding property, and permanent marker stain resistance.
- Rapid curing, one-component dealcoholization condensation reaction type.
- By using Primer-MP, it adhere to PP(Polypropylene).
- X-88-2003A has both high hardness and crack resistance.
- X-88-2005 is an deethanolization type, but can form a film in a short time.

### ■ General Properties

Product name		X-88-2003A	X-88-2005	KR-400 (Conventional grade)
Tack-free	min	<30	<30	30-60
Pencil hardness	After 7 days	4H	4H	8H
Water contact angle <sup>※1</sup>	(2μL) °	107	104	92
Water fall angle <sup>※2</sup>	(20μL) °	27	38	32
Crack resistance	Room temperature	Good	Good	Good
	150°C×2h After heat resistance test	Good	Poor	Poor
	SUV Test after 1 year equivalent	Good	Poor	Poor
Permanent marker stain resistance		Good	Good	Poor
Generated alcohol		Methanol	Ethanol	Methanol
Adhesion to PP (by using PRIMER-MP)		Good	Good	Poor

※1 Higher value means good performance.

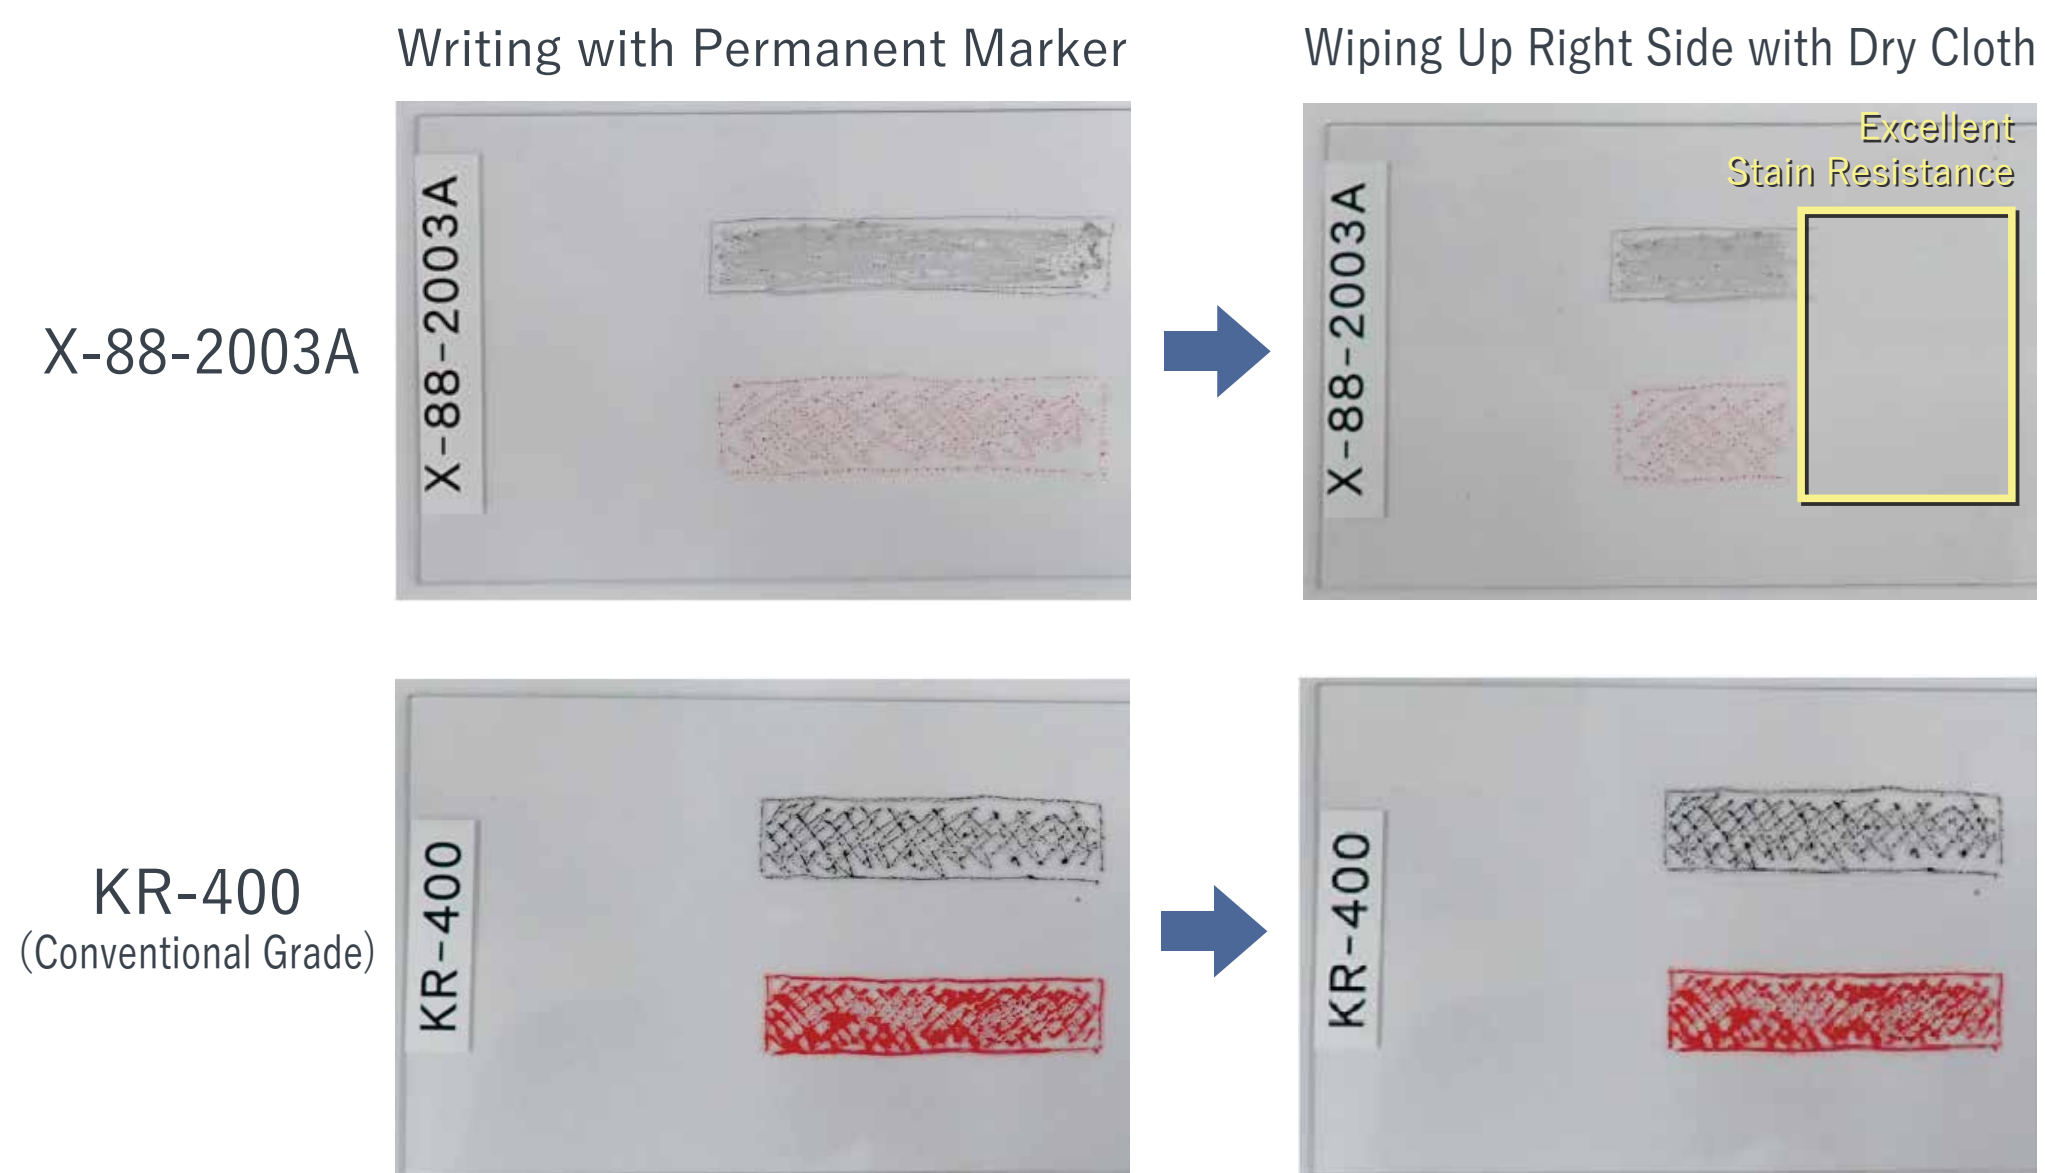

※2 Lower value means good performance.

(Not specified values)

### ■ Comparison with General-Purpose Silicone Oligomers

### ■ Permanent Marker Stain Resistance

Substrate : Soda Glass

# Photo-Curing Hard Coating Agent

Product Usage

Silicone Based Resins

**X-48-5030 / X-48-5031**

Contact → Sales and Marketing Department II  
Phone : +81-3-6812-2407

## ■ Features and Benefits

- Solvent-free photo-curing hard coating agent.
- Forms a coating film with excellent scratch resistance and low warpage when exposed to light in the atmosphere.
- It can be used for coating applications that require low viscosity, such as spray coating.
- Normal product (X-48-5030) and high weather resistant product (X-48-5031) are available.
- Recommended cure conditions = High pressure mercury lamp (in air): 2,400mJ/cm<sup>2</sup>

## ■ Applications

- Hard coating of organic resin parts (PMMA, PC, PET, etc..)

## ■ General Properties / Film Properties

Coating Physical Properties※ <sup>1</sup>	X-48-5030	X-48-5031	Comparative paint (DPHA/HDDA/Photoinitiator※ <sup>3</sup> =85/15/5)
Viscosity mPa・s	40	60	520
Pencil hardness 750g	2H	2H	2H
Steel wool resistance※ <sup>2</sup>	Good	Good	Good
Taber test (500 g × 500 rotation)	ΔHz = 5.0	ΔHz = 6.8	ΔHz = 12.3
Low warp property	Good	Good	Poor

※<sup>1</sup> Coating conditions: Each sample was coated on a polycarbonate substrate with a bar coater (#8)  
→ Light irradiation (in air, high-pressure mercury lamp: 2,400 mJ/cm<sup>2</sup>)

※<sup>2</sup> #0000, 200 g, No scratches after 10 cycles: Good, Scratches: Bad

※<sup>3</sup> DPHA: dipentaerythritol hexaacrylate, HDDA: hexanediol diacrylate, Photoinitiator: Omnirad-1173 (manufactured by IGM Resins)

(Not specified values)

## ■ Warpage Comparison

# Room Temperature Cure Water Repellent Silicone

Silicone Based Resins

X-48-2316

Contact → Sales and Marketing Department II  
Phone : +81-3-6812-2407

## ■ Features and Benefits

- A solvent-free, low-viscosity catalyst-containing one-component type.
- It has a tack-free time of less than 10 minutes at normal temperature, and forms a cured film.
- It forms a cured film with excellent solvent resistance, water repellency, release property, electrical insulation and heat resistance
- Since it can be made thicker, it is possible to create a coating with excellent luster
- It is possible to form a film with high hardness and high strength.

## ■ Cured Film Properties

Product name	X-48-2316
Tack-free <sup>※1</sup> min	8
Acetone rubbing <sup>※1</sup> Times	>50
Water contact angle (2 $\mu$ L) <sup>※1</sup> °	103
Pencil hardness <sup>※1</sup>	4B
Steel plate adhesion <sup>※1</sup>	100 / 100
Glass Epoxy adhesion <sup>※2</sup>	100 / 100
Heat resistance <sup>※2</sup> 150°C×500h	No change
Moisture and Heat resistance <sup>※2</sup> 85°C/85%RH×100h	No change
Long term migration test <sup>※2</sup> 100V/60°C/90%RH×1,000 h	No change
Flame retardancy <sup>※3</sup>	V-0 equivalent

(Not specified values)

Cure conditions: Film thickness 10  $\mu$ m, 25° C/50%RH×1 week  
<sup>※1</sup> Substrate: zinc phosphate treated steel plate   <sup>※2</sup> Substrate: FR-4  
<sup>※3</sup> In-house simple evaluation results in accordance with the flame retardant UL94 standard

## ■ General Properties

Product name	X-48-2316
Type	Methyl
Appearance	Pale yellow to yellow liquid
Viscosity at 25° C mPa · s	100 - 200
Solvent	Not contained

(Not specified values)

## ■ Applications

- Water repellent coating
- Release coating
- Conformal coating
- Electrical insulation coating

## ■ Comparison with Fluorine-based Water-repellent Coating Agents

Product name	Fluorine coating	X-48-2316
Water contact angle (2 $\mu$ L) <sup>*1</sup> °	++	+
Hexadecane contact angle (2 $\mu$ L) <sup>*1</sup> °	++	+
Water fall angle (20 $\mu$ L) <sup>° *1</sup>	+	++
Gloss	±(No change)	++(Greatly improved)
Film thickness	±(Possible up to several $\mu$ m)	++(Possible up to several mm)
Compatibility	±(Fluorine solvent)	+(General organic solvent)
Heat resistance, Flame retardancy	±(Thermal decomposition)	++(No thermal decomposition)

\* 1 Substrate: Glass, Film thickness 5  $\mu$ m  
 ++: Excellent   +: Good   ± : Poor

(Not specified values)

## ■ Cured Film Properties (without Substrate)

Cured film property (2 mm thickness without substrate)		
Hardness Durometer A		90
Tensile strength MPa		5
Volume resistivity T $\Omega$ · cm		2 - 3
Dielectric breakdown strength kV/mm		>20
Elongation at break %		20 - 30

(Not specified values)

## Cured Film Appearance

(Film thickness 1 mm, after 25° C/50%RH×1 day)

**Possibility of use  
as fluorine substitute material**

# Cationic Silicone Film-Forming Emulsion

Product Usage

Silicone Based Resins

**X-52-8500DA / X-52-8499D / KM-9804**

Contact → Sales and Marketing Department II  
Phone : +81-3-6812-2407

## ■ Features and Benefits

- Each cyclic siloxane content is less than 0.1% (in the product).
- Forms a silicone film after drying
- Does not contain metallic catalysts such as tin catalysts

## ■ Application

- Textile treatment agent
- Binder for chemical solution (cationic aids, etc.)
- Top coating agent for resin molded products

## ■ Appearance of Emulsion and Film

〈Emulsion Appearance〉

〈Film Appearance〉※1

**Flexible Film**

\*1: Weigh 20 g of X-52-8499D on a 15 cm x 10 cm polypropylene tray. → Air drying (25°C x 48 hours)  
→ Heating (105°C x 1 hour)

## ■ General Properties

Product name		KM-9772 (Conventional product)	X-52-8500DA	X-52-8499D	KM-9804
Features	Item				
	Ionic	Anion	Cation		
	Metal catalyst	None	None		
	Cyclic siloxane (D <sub>4</sub> /D <sub>5</sub> /D <sub>6</sub> )※2	0.1% or more for each	Less than 0.1% each		
Em physical properties	Film strength improver	Containing	Containing	None	None
	Appearance	Creamy white	Creamy white	Creamy white	Creamy white
	Non-volatile content (105°C x 3h) %	40	41	46	46
	pH	4.8	5.3	5.3	5.4
※3 Film physical properties	Viscosity at 25°C mPa·s	10	7	16	15
	Hardness Asker C	25	47	23	—※4
	Tensile strength MPa	0.63	0.60	0.41	—※4
	Elongation at break %	640	560	650	—※4

(Not specified values)

※2 : D<sub>4</sub> : Octamethylcyclotetrasiloxane, D<sub>5</sub> : Decamethylcyclopentasiloxane,  
D<sub>6</sub> : Dodecamethylcyclohexasiloxane

※3 : Weigh 20 g of emulsion on a 15 cm x 10 cm polypropylene tray → Air drying (25°C x 48 hours)  
→ Heating (105°C x 1 hour)

※4 : Film physical properties cannot be measured because the internal phase silicone of the emulsion is gel with fluidity.

**The properties of the silicone film can be adjusted.  
Please contact us if you are interested.**

# Silicone Resin Emulsion

Product Usage

Silicone Based Resins

Resin Hybridization Agents

## X-52-8432

Contact → Sales and Marketing Department II  
Phone : +81-3-6812-2407

## ■ Features and Benefits

- Emulsion type silicone resin.
- A coating film with excellent weatherability, heat resistance, and anti-fouling properties can be obtained.
- By heating, highly hard coating film will be formable.
- Resin modification is possible by cold blending\* with water-based resin.

\*Cold blend = A method of simply mixing and blending without heating

## ■ Applications

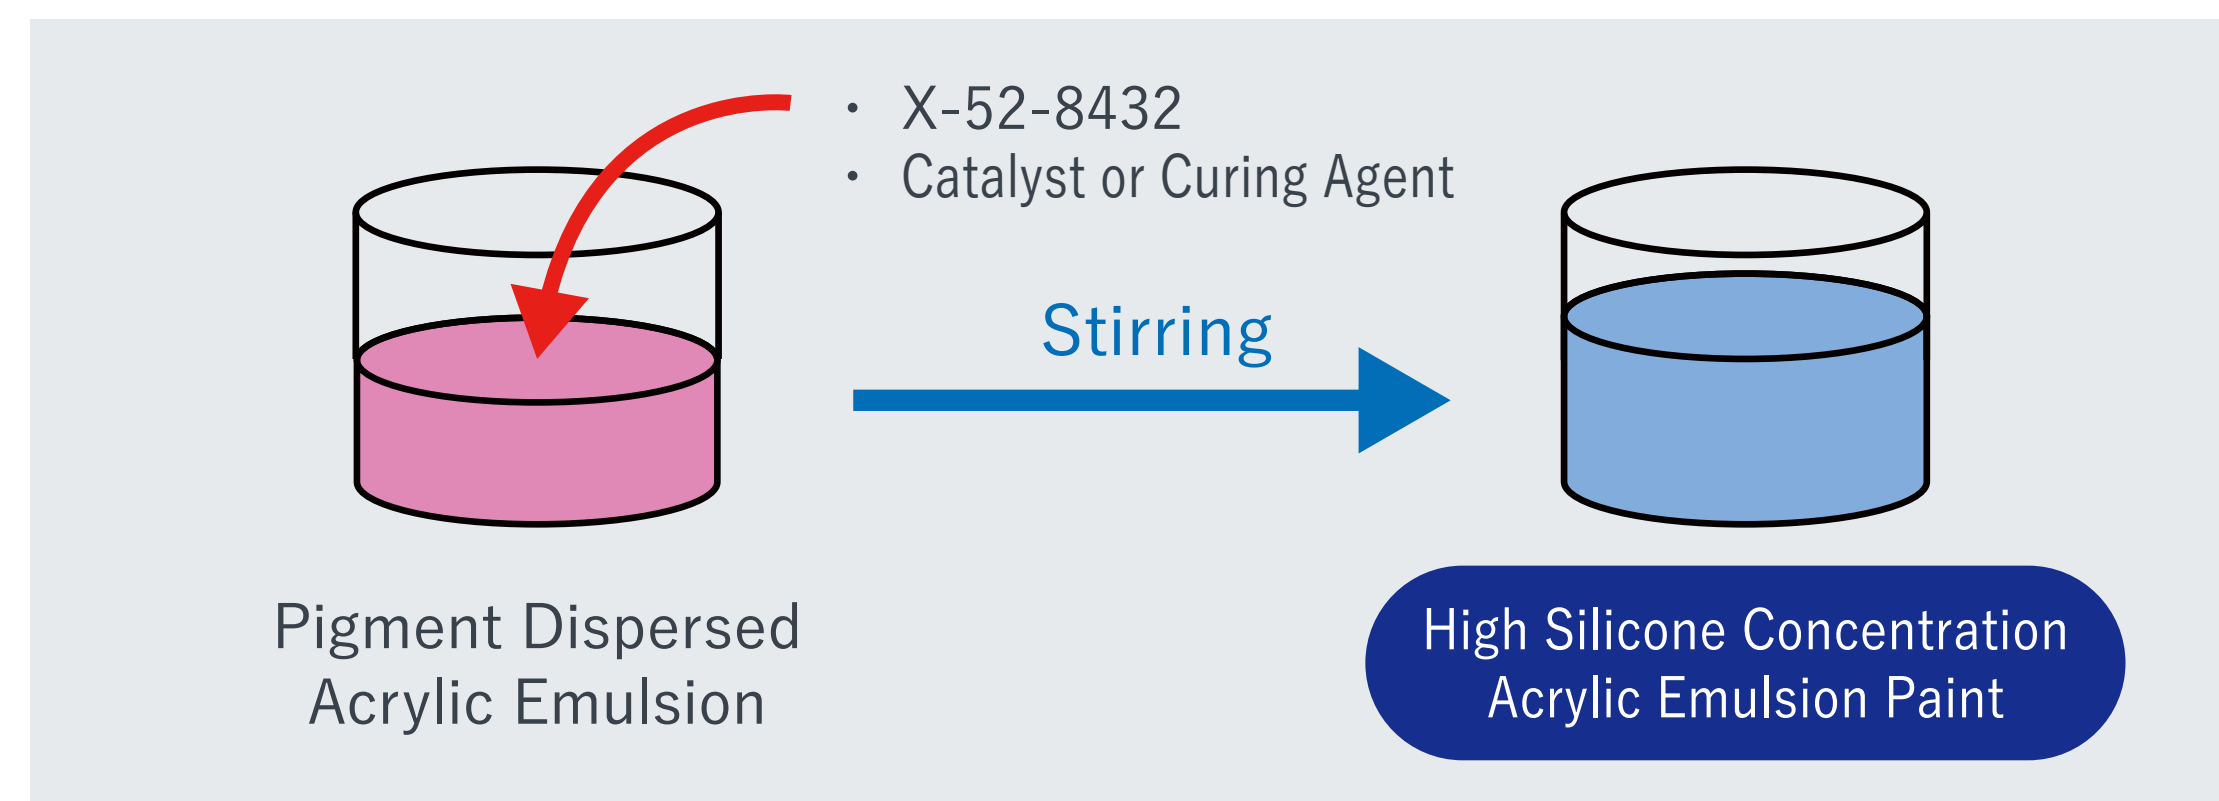

- Resin binder
- Modifier for water-based resin such as acrylic emulsion
- Heat resistant paint, highly weather resistant paint

## ■ General Properties

Item	Product name	X-52-8432
Applicable resin		Water based resin
Catalyst		Not contained
Usage		Base resin, resin modifier
Appearance		Creamy white water dispersion
Active ingredient %		50(water solution)
Viscosity at 25°C mPa · s		400

(Not specified values)

## ■ Model of Resin Modification

## ■ Weather Resistance Test Results when Blended with Acrylic Emulsion

Evaluate the gloss and appearance of the coating film using a super-accelerated weathering tester

※1 1 cycle: UV (90 mW) 4 h irradiation → darkness 4 h → condensation 4 h, 10 cycles = 1 year

※2 EC-9150: Acrylic emulsion manufactured by Saiten Chemical Industry Co., Ltd.

※3 Contains 20% of X-52-8432 in resin solid content

# Silicone-Based Flame Retardants for Polycarbonate

Product Usage

Resin Hybridization Agents

## KR-2710 / KR-481 / KR-480

Contact → Sales and Marketing Department II  
Phone : +81-3-6812-2407

### ■ Features and Benefits

- These silicones exhibit flame retardancy when used **in combination with a sulfonate**.
- **Formulated without fluorine additives**, it achieves **UL94 V-0 flame retardancy** while maintaining transparency.
- Compared to other flame retardants, the addition amount is small and it is less likely to decompose due to heat, making it possible to **design recyclable resins**.

### ■ Estimated Flame Retardant Mechanism

### ■ General Properties

Item	Product name	KR-2710	KR-481	KR-480
Functional groups		-Me/Ph/H	-Me/Ph	-Me/Ph
Structure		Straight chain	Branch	Branch
Appearance		Colorless transparent liquid	White flake	White flake
Active ingredient %		100	100	100
Softening point °C		-	130	90
Refractive index		1.52	1.56*	1.54*
Viscosity mm <sup>2</sup> /s		50	-	-
Transparency when adding to PC		+(Transparent)	±(Relatively transparent)	-(Not transparent)

\*Estimated value

(Not specified values)

### ■ Transparency when Adding Polycarbonate

Compared to KR-481 (conventional product), **KR-2710 does not impair transparency** even when added to PC.

Test piece thickness : 2mm  
Polycarbonate: NOVAREX M-7027U

# Organofunctional Cyclic Siloxane Materials

Product Usage

Resin Hybridization Agents

Contact → Sales and Marketing Department II  
Phone : +81-3-6812-2407

## Features and Benefits

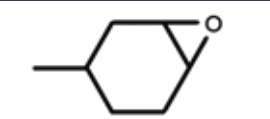

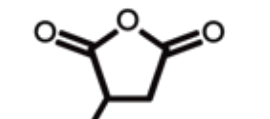

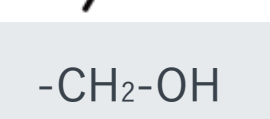

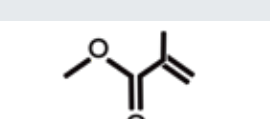

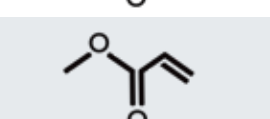

- Stress relaxation
- Reduced cure shrinkage

## Applications

- Reactive binder
- Reactive diluent
- Cross-linker for resin modification

## General Properties

### 【Tetra Functional Type】

Product name	Active ingredient %	Organic functional groups X	Functional group structure	Consistency at room temperature	Viscosity 25°C, mPa・s	Functional group equivalent g/mol
KR-470	100	Alicyclic epoxy		Transparent liquid	3,000	200
X-40-2701	100	Glycidyl		Transparent liquid	100	160
X-48-9670 PMA70	70 PGMEA solution	Succinic anhydride		Transparent liquid	500	270
X-48-1140	100	Primary alcohol	-CH <sub>2</sub> -OH	Transparent liquid	100	190
X-48-5040P	100	Methacrylic		Transparent liquid	70	200
X-48-5140B	100	Acrylic		Transparent liquid	50	200
X-48-9504	100	Phenol		Transparent liquid	400,000	190

(Not specified values)

## General Structures

### 【Tetra Functional Type】

### 【Dual Functional Type】

 = Organic chain    R=Alkyl Groups  
X=Reactive Functional Groups

## UV Cure Film Cure Shrinkage Relaxation Evaluation

### X-48-5140B

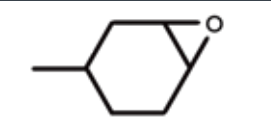

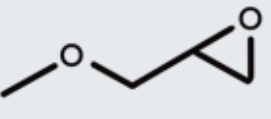

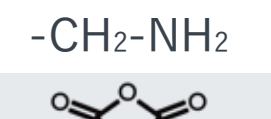

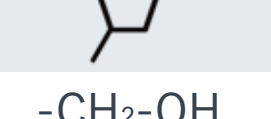

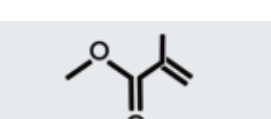

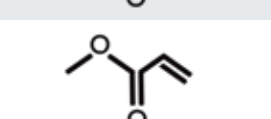

A composition containing 2 wt% of a photoinitiator is applied to a PET film and cured at 600 mJ/cm<sup>2</sup> under N<sub>2</sub> atmosphere.

### Comparison: DPHA (Hexafunctional acrylic)

### 【Dual Functional Type】

Product name	Active ingredient %	Organic functional groups X	Functional group structure	Consistency at room temperature	Viscosity 25°C, mPa・s	Functional group equivalent g/mol
X-40-2678	100	Alicyclic epoxy		Transparent liquid	120	290
X-40-2728	100	Glycidyl		Transparent liquid	30	270
X-48-6942	100	Primary amine	-CH <sub>2</sub> -NH <sub>2</sub>	Transparent liquid	30	250
X-48-9672	100	Succinic anhydride		Transparent liquid	2,400	300
X-48-1142	100	Primary alcohol	-CH <sub>2</sub> -OH	Transparent liquid	100	260
X-48-5042P	100	Methacrylic		Transparent liquid	16	310
X-48-5142B	100	Acrylic		Transparent liquid	20	310
X-48-9502	100	Phenol		Transparent liquid	1,000	250

(Not specified values)

# Water Repellent, Stain Resistant, High Weather Resistant Hydroxyl Group-Containing Silicone Oligomer

Product Usage

Resin Hybridization Agents

## X-48-1903 / X-48-1904 Series

Contact → Sales and Marketing Department II  
Phone : +81-3-6812-2407

### ■ Features and Benefits

- These are silicone oligomers containing alcoholic hydroxyl groups.
- Resin modification is possible by simply mixing at room temperature (cold blending), eliminating the need for large synthesis equipment.
- It has excellent resin compatibility and is unlikely to bleed out or separate during curing.

### ■ Applications

- Resin modifier

### ■ Applicable Resins

- Polyurethane
- Polyester
- Melamine resin, etc.

### ■ Structure Model

### ■ General Properties

Product name	X-48-1903S	X-48-1903L	X-48-1904S	X-48-1904L
Imparting properties	<b>Water repellency / Stain resistance</b>		<b>Weather resistance</b>	
Additional properties	Excellent compatibility	Reduced addition amount	Excellent compatibility	Excellent water repellency, stain resistance
Appearance	Colorless transparent liquid	Slightly white cloudy liquid	Colorless transparent liquid	Colorless transparent liquid
Active ingredient %	100	100	50	50
Viscosity at 25°C mm <sup>2</sup> /s	4,000	1,000	50	50
Solvent	Not contained	Not contained	Toluene	Toluene
Recommended addition amount wt%	1~10	0.5~5	10~50	5~20

(Not specified values)

### ■ Antifouling / Water Repellency Test

Conditions Item	Non additive	X-48-1903L 1wt % added
Appearance		
Water contact angle 2μL °	90	101

【Test conditions】 Paint: 2-component polyurethane paint (Not specified values)  
Film thickness: 14μm, Substrate: glass plate  
Write with permanent marker Mackey (manufactured by Zebra Co., Ltd.)

### ■ Weather Resistant Test (Gloss Retention Ratio)

【Test conditions】  
Paint: 2-component polyurethane paint  
Film thickness: 30μm  
Substrate: Polyester coated steel plate  
Gloss retention ratio:  
Calculated from 60 degree specular gloss measurement  
SUV test:  
1 cycle=UV (90mW) irradiate for 4h  
→ Darkness 4h → Condensation 4h  
※10 cycles equals one year's worth of UV irradiation

# Silicone Powder

Product Usage

Stress Relief  
Impact Resistance

Surface Slipperiness  
Abrasion Resistance  
Flexibility (Feeling)

Light Diffusivity  
Mattiness

Resin Hybridization Agents

Surface Modifiers for Coating

Contact → Sales and Marketing Department II  
Phone : +81-3-6812-2407

## 3 Types of Products

### Hybrid Silicone Powder

Composition:  
Rubber powder coated with resin particles

### Silicone Resin Powder

Composition:  
Three-dimensional  
crosslinked product

### Silicone Rubber Powder

Composition:  
Crosslinked product  
of linear molecules (silicone)

## How to Use

- Used by adding to resins, coating agents, etc.
- Recommended addition amount (estimate): 1~10wt%

## Applications

- For synthetic resin:  
They improve impact resistance and abrasion resistance and add light diffusivity, etc.
- For paints, inks and coatings:  
They improve surface slipperiness, flexibility (feeling) and matte properties, etc.

## Enhanced Properties

### Stress Relaxation Impact Resistance

Hybrid Silicone Powder	++
Silicone Resin Powder	±
Silicone Rubber Powder	++

### Surface Slipperiness Abrasion Resistance

Hybrid Silicone Powder	++
Silicone Resin Powder	++
Silicone Rubber Powder	+

### Flexibility (Feeling)

Hybrid Silicone Powder	++
Silicone Resin Powder	-
Silicone Rubber Powder	++

### Light Diffusivity Matte Property

Hybrid Silicone Powder	++
Silicone Resin Powder	++
Silicone Rubber Powder	++

# Highly Reactive Surface Modifier

Surface Modifiers for Pigments & Fillers

## X-88-398

Contact → Sales and Marketing Department II  
Phone : +81-3-6812-2407

### Features and Benefits

- It has a cyclic silazane structure.
- Surface treatment is possible by simply mixing with the target object, without requiring prior hydrolysis.

### Applications

- Imparting surface water repellency and improving filler dispersibility

### Chemical Structure

### General Properties

Product name	
Item	X-88-398
Active ingredient %	100
Viscosity at 25°C mm <sup>2</sup> /s	7.5

(Not specified values)

### Reaction Model

### Surface Treatment Data

Product name	X-88-398	KBM-573	KBM-573 Hydrolyzate
Item			
Chemical structure			—
Surface treatment condition			
Water contact angle 5μL	90.0 °	43.6 °	58.9 °

(Not specified values)

Test condition:

- ① After surface treatment by immersing a glass substrate in X-88-398/toluene solution, the water contact angle was measured.
- ② After surface treatment by immersing a glass substrate in KBM-573/toluene solution, the water contact angle was measured.
- ③ After surface treatment by immersing a glass substrate in a hydrolysis solution of KBM-573/MeOH/H<sub>2</sub>O, the water contact angle was measured.
